

PATIENTS KNOW BEST®
MANAGE YOUR HEALTH

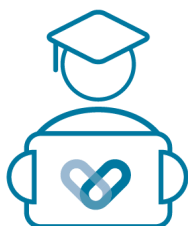

Free learning tool to support remote consultation and patient management skills

Patients Know Best (PKB) offers its platform **free of charge** to institutions teaching healthcare students. **PKB is already used by a school within your institution** - interprofessional learning can be easily facilitated through the platform. Use of the platform can teach students about patient centred care, communication and empower them to become digital leaders.

On the platform, **students** can:

- look at case study patients, including medications, lab test results, symptom tracking and more
- practice monitoring care / treatment remotely for simulated patients
- communicate directly with real patient volunteers via secure messaging
- see a longitudinal view of a patient volunteer's health, outside of office hours
- develop and share care plans with patients and other students
- learn how to safely share data with patients
- practice digital skills on an **NHS approved platform**.

“With PKB, I’ve been able to get the students to work together in small multidisciplinary groups to plan the management of patients and prioritise their workload: the students loved this autonomy and the interactivity that it brings”

- Senior Lecturer, University of Manchester
