Background:

Content :

Conclusion:

Keywords: Cattle, import, indigenous, malaria, *Plasmodium sp*

Introduction

This guideline is a template for review article submission for Jambura Medical and Health Science Journal (JMHSJ). Authors are allowed to modify this template for submission purpose. All submitted manuscripts must not previously published and not under consideration for publication elsewhere. Manuscripts to the journal should be written in English.

In the introduction, you need to state the objective of the study and provide enough background. Also provide information about the context, indicates the motivation for the review and explains the text structure.

Subheading 1

The amount of the subheadings in every review article can be different, depends on the topic being discussed. A coherent structuring of the topic is necessary to develop the section structure. Subheadings reflect the organization of the topic and indicate the content of the various sections.

Subheading 2

All measurements have to be expressed in Conventional or International System (SI) units. Decimal fraction is written in English version (for thousand use point (,) and decimal use comma (.)). Drug names must use generic names. When proprietary brands are used in research, include the brand name, the name and location (city & country) of the manufacturer in parentheses after the first mention of the generic name. To support your review, you can include 6 figures and/or tables in total.

For better structuring, only cover one idea or aspect per paragraph. Avoid referring to only one study per paragraph, consider several studies per paragraph instead.

Table 1. Lorem ipsum dolor sit amet

Parameter	Value
Parameter a (unit)	Mean±SD
Parameter b (unit)	Mean±SD

Parameter c (unit) Mean±SD

*Chi square test
