AI による概要

In Google Search, your stored conversation history plays a central role when you are actively using **AI Mode**, but **it has a very different relationship with standard AI Overviews**.

Google Help +1

The breakdown of how much your stored conversation history is considered depends entirely on which layout you are looking at:

## 1. Within an Active AI Mode Session (High Consideration)

When you are actively inside the dedicated **AI Mode** tab or interface, the system heavily relies on your immediate session history.

Digital Marketing Institute +2

- **Multi-Turn Context:** AI Mode is designed for deep, conversational search. It actively retains the context of your previous questions and the AI's responses within that specific thread. For example, if you ask "What are the best hiking trails in Oregon?" and follow up with "Which ones are dog-friendly?", it remembers you are asking about Oregon.

- 
- Google Help +2
- 
- **Resuming Past Threads:** If you have Google's [Search Services History and Personalization](#) enabled, your past AI Mode threads are saved. Opening an old chat from your AI Mode history panel reloads that exact conversation context, allowing you to pick up right where you left off.
- 
- Google Help +2
- 

## 2. Cross-Session "Memory" in AI Mode (Moderate to High)

Google utilizes an architectural layer called **Personal Context / Personal Intelligence** across its generative Search ecosystem.

Google Help +1

- **Preference Inferences:** Powered by background models like the Gemini series, Google AI Search builds a profile of your preferences based on your past search history and prior AI interactions.

- 
- ZipTie.dev +1
- 
- **Tailored Outputs:** If you frequently use AI Mode to research software development or vegan cooking, a broad, ambiguous query in a brand-new AI Mode session may be subtly tailored to favor those topics because the

underlying model draws from your broader Personalized Recommendations settings.

- 
- Google Help +1
- 

### 3. Standard "AI Overviews" on the Main Results Page (Low Consideration)

It is crucial to distinguish **AI Mode** from standard **AI Overviews**. AI Overviews are the quick AI-generated summary boxes that appear at the very top of a traditional Google search page.

Google Help +1

- **Stateless by Design:** Standard AI Overviews are primarily stateless and query-dependent. They analyze the specific keywords of your current search and summarize the top web results in real-time.

- 
- Search Atlas +1
- 

- **Minimal Chat History Influence:** A traditional AI Overview does **not** read through your past conversational chat transcripts from AI Mode or the standalone Gemini app to construct its summary. While it might use basic, account-level search personalization (like your current location or general search history), it treats each new search as a fresh prompt rather than a continuation of an AI conversation.

- 
- Google Help +2
-

## How to Control What the AI Remembers

If you want to adjust or entirely stop the AI from considering your history, you can manage it through your account settings:

1. **Turn off Personalization:** Go to your Google Search settings, find the **Personal context** or **Personalized Recommendations** menu, and toggle "**Your past chats with AI on Google Search**" to OFF.
2. 
3.  Google Help +1
4. 
5. **Clear Specific Threads:** You can manually view and delete individual chat logs by clicking the **History clock icon** inside the AI Mode dashboard or by visiting the [Google My Activity](#) dashboard and filtering by Search/AI Mode.
6. 
7.  Google Help +3
8. 

Are you experiencing a situation where the AI is bringing up **unexpected details** from your past, or are you trying to get a new session to **remember a specific style** or set of constraints? Let me know so I can guide you on the exact settings to adjust.
