Creating a Brigade-Wide Project Index

by Bonnie Wolfe (Hack for LA), Colin King-Bailey (OpenOakland), Chris Alfano (Code for Philly)

– Brigade Congress 2019

Session Notes

What is the value of the index to you?

Who are you?

* 19 attendees
    1. Know what a GH tag is?
        1/2
    2. How many have opened PR?
        4/5
    3. How many brigade leaders?
        7/19
    4. How many project leads?
        9/19
    5. Developers?
        4/5
    6. UX/UI/Mgmt/etc?
        1/2

Tech Demos

Search engine

Crawler

currently crawl Org repos, tagged repos, and whatever is provided at the key `project_list_url` in organizations.json

Discussion

How is this different/overlapping with topic tagging tools?
  that is where the schema file comes in

re: participation
  it would useful to have a 5-15 min video explaining how to participate (tagging now, publiccode.yml later)

is there any standardization of topic tags?
  not yet. just put what you think of. as we discover what people are using we can catalog them & encourage certain tags
  see: UN sustainable development goals list

it only crawls GH?
  eventually it will crawl any git vc service (gitlab, etc)

how to capture non-git project
  JCAN?
  NYT wiki-ish tool from Diana?

what is the grand vision?
  in a place like newark, with a lot of data and not a lot of techies, we would like to find projects that serve a need we have that can be re-deployed locally with minimal work
  code of orlando would like to see a quiz matching members to projects in their interests (make it fun and personal)
