

CodeSpaces

You can set up this repo to run within GitHub if you don't want to run it locally on your laptop. Here's how you do that with GitHub CodeSpaces.

Head over to [GitHub Frontend](#)

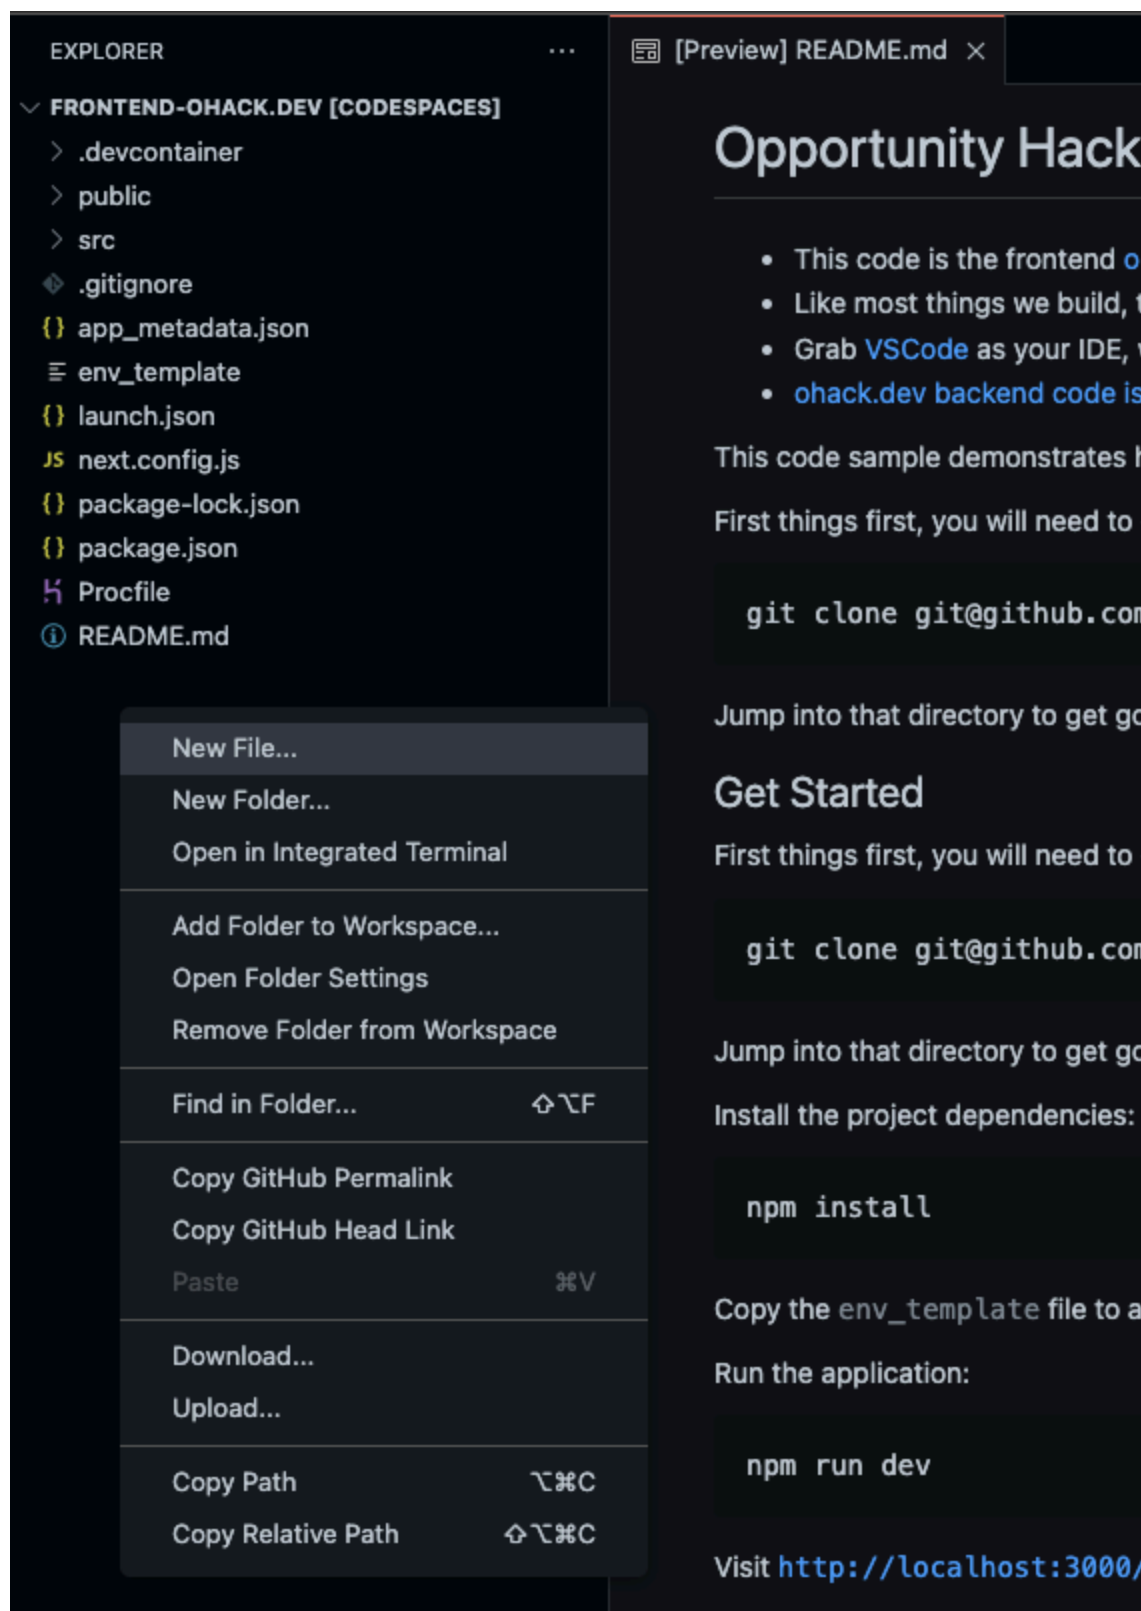

Click Code > Code Spaces

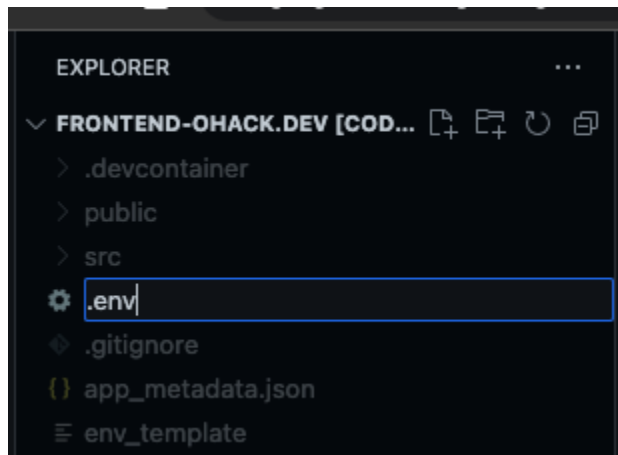

Setting up your codespace

💡 **Tip** Use the command palette to search and select commands in Visual Studio Code. [Learn more](#)

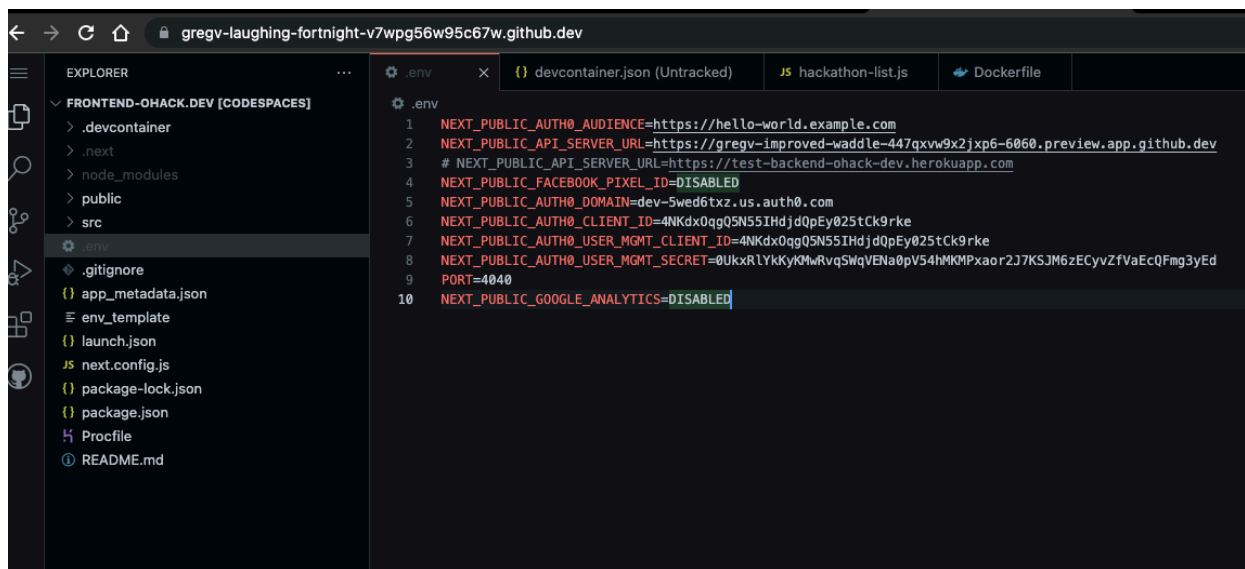

Name the file .env (don't forget the dot!)

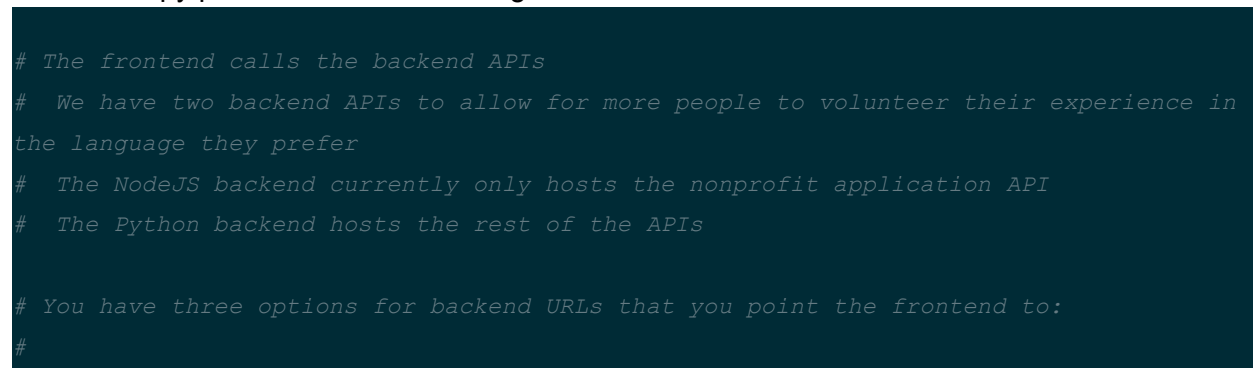

Frontend Environment (.env)

Here's what the file looks like, with the contents:

Create a .env file and add these contents into there

Install npm packages

```
@gregv → /workspaces/frontend-ohack.dev (develop) $ npm install
```

Run the code with **npm run dev**

```
gregv → /workspaces/frontend-ohack.dev (develop) $ npm run dev
> frontend-ohack-dev@0.1.0 dev
> next dev

ready - started server on 0.0.0.0:3000, url: http://localhost:3000
info - Loaded env from /workspaces/frontend-ohack.dev/.env
```

Your application running on port 3000 is available. See all forwarded ports

Open in Browser Preview in Editor

Before pushing back to the develop branch, use **npm run build** to validate everything is working.

If you are doing backend work, you'll also need to [Import Firebase Data](#)
