

FUTURE LENS

PLAN 2: AI x MSDEC

What (Whole)

AI x MSDEC is a technological extension of the Metacognitive Student Data Evaluation Cycle discussed in “ESSAY 3: PLAN” in the website’s “Metacognition” section, whose algorithm evaluates students’ data and generates an I-O psychology-backed improvement plan students can apply to their routines. The AI’s purpose is to automate the last two steps of the MSDEC (Evaluation and Design) to not only save time for other tasks but use research-backed approaches to maximize the cycle’s effectiveness and efficiency.
