Agriculture 8

UNIT: Beef Cattle

WEEK 9: March 22-26,2021

Learning Targets

This week we will learn...

- At what age/weight are beef cattle usually slaughtered for meat consumption?
- What are the different phases of the beef industry?
- What is biosecurity? How is it used on the school farm?
- What is a zoonotic disease?
- What is a balanced ration? How does it vary between cattle, horses, sheep, etc.?
- What are the dangers involved with working with animals?
- What is a Premise ID Number?

I can...

- I can identify different types of beef cattle operations.
- I can explain the importance of biosecurity in the animal industry.
- I can describe how animal identification systems can track an animal's location.

Learn About It:

You can explore some, or all of these resources. If you want to see a resource again, go for it!
