World

General Building

The World of Bokkuro.

To put it simply, a Realm of another reality.

It exists between all existence, you can not enter it despite that.

The timeline doesn't have a significant meaning.

Hundreds of years can pass in a blink of an eye.

All Bokkuro because of that much mentally matured, they can blink and enter The realm, spending a century in that realm and returning back to their original world.

The Fourth is the true host of the realm, without the Fourth it will crumble on itself.

Everything is controlled, Time, Physics, the Law of Nature, everything can be modified.

World Setting

The Realm doesn't have a definite structure.

Though, it can contain multiple worlds with different settings and buildings and can be described as **Section.**

The Order keeps everything in place and prevents imbalance in World, doing it in The Fourth place.

The Order

Law Of Neutral

Law Of Neutral

created by the Fourth to keep everything in line.

1 - Act of Disrupting the balance of Section is Forbidden.

2 - One must not open their mouth about the Realm.

3 - All Bokkuro are equal.

4 - Do not stand in between the Realm.

Section

The section is a world that is connected to multiple other worlds.

Every Section has its ecosystem and world setting.

Bringing unpermitted resources to another section is forbidden.

Section B-4

World Building

The world of B-4 is naturally ridden by nature.

Lust green overgrowing up against towering skyscrapers, it takes over most of civilization, despite that technology and culture are growing.

The nation is operated by the people, one meeting can take upward of thousands of people, and it runs on conflict and agreements in the name of improvement.

The world is in a state of peace while simultaneously at war.

By nature design, B-4 has a completely different law of physics.

Allowing a lot of technology and dynamic, almost alien-like compared to earth.

The biology of living animals is also changed, and the structure of nature while similar and yet allows for much variety of environments.

Nature Structure

Biological Organism.

Biological Organism in section 4 is very not complicated just like the Earth it is an extensive gallery of categories but does not have the evolution for survival or fitness it is created not evolved.

But by no means flawed,

Because the law is different it allowed for more technology and innovation using biotechnology it becomes reliable just like metal and oil.

Ores And Natural Resources

Section 4 allows for many types of material to be used in research and innovation that could make a new age. The Way section 4 operate created a lot of metal resource that have unique property from heat resistance to super lightweight and conductive material allowing for a lot of Technology to be created.

While the world doesn't have much use for a lot of Technology as it copied the earth's technology but in military use, there is a lot of potentials to be explored such as MT called muscle tracer, or AC called Armored Core.

Weaponize the resource to it fullest.

Terrain And Ecosystem

Section 4 is super expansive, bigger than earth thousands of times.

Possessing so much to be uncovered, the ecosystem basically could be changed by natural disasters or the disappearance of a species.

94% of the section 4 world is not yet discovered.

Trying to explain everything is impossible.

The Habitant

Bokkuro

Bokkuro is not human.

Bokkuro by itself is not a name, Bokkuro doesn't evolve from sapiens like humans, and Bokkuro doesn't have any exact biological knowledge that is similar to humans.

Bokkuro is not a descendant of The Fourth, nor a Bloodline.

Bokkuro doesn't reproduce biologically or artificially.

Bokkuro simply exists, capable of universe travel by simply closing its eyes.

There is no logical physical or mechanical make sense, it simply denied natural law. Though this ability needs time to get used to as no Bokkuro can access the Between after they have existed.

Bokkuro doesn't have a lifespan, Bokkuro can not age.

They have complete control over their vessel.

Their body doesn't have to evolve, change, or anything. Their body is the peak of itself.

Bokkuro possesses quite a bit of ability, not from their physical form or nonphysical form.

Inter-universe transportation - limitless growth - timeline split communication - voiceless voice - instantaneous comprehension - All-Knowing Eyes - Mental attack immunity - Charge - Hivemind Consciousness.

Though it doesn't mean anything when any Bokkuro can have just as much as the next one.

Power isn't what Bokkuro cares about, they can do whatever, with whatever.

There is no struggle nor joy, they value experience.

Willing to lock their ability, make themselves vulnerable, and make themselves weak.

To experience what they seek, even when the experience itself is harmful to them. It was a decision, a choice that they take.

Curiosity and desire to experience shape the world they lived in.

Technology

Vessel

Vessel Frame - Vessel - VS

VS Frame to be short, military-grade biotechnology.

The VS Frame is the main framework of most mech units, the skeleton supporting everything on top of it.

It is the most important component of a mech, without VS Frame then a VS can not function.

VS Frame housing all the core components of a VS, Reactor, Radiator, Turbine, Muscle Fibers, and various other internal components.

The reason for it being a Biotechnology is that the VS Frame itself is not completely metal and electronic.

Technically the framework is a living being, a VS is a living breathing entity.

But it is not sentiment, it doesn't have a mind nor be a part of a species.

It was created, and mass-produced.

For a VS Frame to become a VS, it needs to be able to move, see and hear.

It is a body with no mind, to be piloted by combatants.

Weapons of war, it is popular with the public as the war underneath keeps raging. Being created to kill, destroyed, and be expendable, I wonder if it truly lives, what will happen…?

VASNKY REACTOR

EN OUTPUT - Maximum energy output of the generator

EN CONSENDER - maximum energy capacity the generator can hold before sending to the energy storage

EN EMCAP - Amount of emergency energy kept in the generator.

GT - type of generator (Thermal, Nuclear, Impact, Fusion)

Most commonly known as Generators or Heart.

The reactor is the main power source for most VS units.

The way it generates its energy is by using a material called Enigse, Enigse is a highly compressed naturally condensed electrical hardened material.

By using a vasnky reactor to cause a reaction from Enigse material by using a specialized chamber, the reactor can take out the energy at lower risk.

Or using a more forceful way by physically causing a reaction using force, can extract more energy from the material but at higher risk.

The Vasnky Reactor technically can generate energy by itself without using any material, and a Combat ready VS generally doesn't need a lot of EN Output.

There are a lot of ways to make energy from Enigse material, some are riskier than others but the most popular one is **Impact**.

Most commonly used by mercenaries that have low en output reactors.

By physically initiating a precise control penetration piercing of the reactive needle into the material, the material will start releasing its compressed energy through the penetrated spot.

Repeating the impact in a short amount of time is risky as the material can go unstable and start making an uneven surface, forcing the condensed energy to the thinner parts and possibly breaking free all at once.
