

Runvia Privacy Policy

Effective Date: June 11, 2026

Last Updated: June 11, 2026

1. Overview

Welcome to **Runvia**.

Runvia is a local-first running training utility designed for structured pace workouts, lap target planning, and race-day preparation. The application operates as a private performance log rather than a content platform and does not provide feeds, social features, or curated media discovery.

This Privacy Policy explains how information is handled during use of Runvia.

2. User Control and Rights

Runvia is designed so that users maintain full control over their training records.

You may:

- Create, edit, or delete running sessions;
- Adjust pace targets, split goals, and training plans;
- Remove timing records, notes, and attachments;
- Export locally stored workout data;
- Revoke device permissions at any time;
- Delete all application data by uninstalling the app.

No account system exists; therefore, all data management is directly user-driven.

3. Local-First Data Design

Runvia operates entirely on-device by default.

Accordingly:

- No registration or login is required;
- No centralized user database is maintained;
- No social sharing or community system exists;
- No activity is transmitted for public viewing;
- No content recommendation engine is used.

All running logs, pace splits, and training configurations remain stored locally unless explicitly exported by the user.

4. Information Created During Use

Runvia only processes data entered voluntarily by the user.

Training Session Data

Users may record:

- Distance and duration;
- Split times and lap pacing;
- Target pace configurations;
- Race-day preparation notes;
- Interval training structures.

Performance Notes

Users may optionally store:

- Subjective effort feedback;
- Breathing or fatigue notes;
- Environmental conditions;
- Personal training reflections.

Optional Media Inputs

Users may attach:

- Stopwatch screenshots;
- Route photos;

- Voice commentary;
- Written annotations.

Derived Visual Metrics

Runvia may generate local visual summaries such as:

- Pace distribution charts;
- Weekly training intensity views;
- Split consistency visualizations;
- Session progression summaries.

All computations occur locally on the device.

5. Training Data Interpretation Disclaimer

Runvia is a performance organization tool, not a medical or coaching service.

Users acknowledge that:

- Pace targets are user-defined references only;
- Charts and analytics are generated from self-reported data;
- Training suggestions (if any) are informational only;
- The application does not provide medical advice, injury prevention guidance, or professional coaching certification;
- Race readiness indicators are not guarantees of performance outcomes.

Users remain responsible for their training decisions and physical condition.

6. Information Not Collected

Runvia follows a strict minimal-data philosophy and does not intentionally collect:

- Personal identity information;
- Contact information;
- Location tracking history;
- Government identifiers;
- Biometric or facial recognition data;

- Financial information;
- Advertising identifiers;
- Behavioral analytics profiles.

Any media stored locally is not processed for identity recognition or profiling purposes.

7. Technical Protection Measures

To protect local data integrity, Runvia may apply:

- Sandbox-based application isolation;
- Encrypted local storage (where supported by the system);
- Permission-gated access to device resources;
- Integrity checks for workout databases;
- Secure runtime data handling.

These mechanisms are intended to reduce unauthorized access risk on the device.

8. Administrative and Operational Safeguards

Runvia maintains privacy-oriented operational practices including:

- Data minimization in feature design;
- No external analytics tied to personal logs;
- Restricted internal debugging datasets (non-identifiable where applicable);
- Periodic review of security and compliance standards.

Users are encouraged to secure their devices using system-level protections.

9. Device Permissions

Certain features require optional permissions:

Location (Optional)

Used only when recording route-based running sessions initiated by the user.

Camera Access

Used for capturing training or route-related images.

Photo Library Access

Used to import or save user-selected images.

Microphone Access

Used for optional voice notes during training.

Local Storage Access

Used to store training sessions, charts, and notes.

All permissions are user-controlled and can be revoked at any time.

10. Data Retention and Deletion

All training data remains on the device until:

- Deleted manually by the user;
- Removed via application reset;
- Erased when the application is uninstalled.

Because Runvia does not maintain cloud storage, deleted data may not be recoverable.

11. Content Responsibility

Users are solely responsible for all content created within Runvia, including training logs, notes, and attachments.

The following content is strictly prohibited:

- Pornographic or explicit content;
- Illegal materials;
- Fraudulent or misleading records;
- Content violating intellectual property laws;
- Malicious or harmful content.

Violation reports may be reviewed and addressed within twenty-four (24) hours where applicable.

12. Updates and Changes

Runvia may periodically release updates including:

- Performance improvements;
- Bug fixes;
- Feature enhancements;
- Security adjustments.

Continued use after updates indicates acceptance of revised functionality.
