Introduction

Hello and welcome to Redgrave of Adamantoise's trigger collection. We're all bad, and choose to disrespect the content, so we try to get as many triggers as we can (not the kind that makes you shake and get angry unless for think ACT is a sin). For new users, check out the [How to Trigger](#) section.

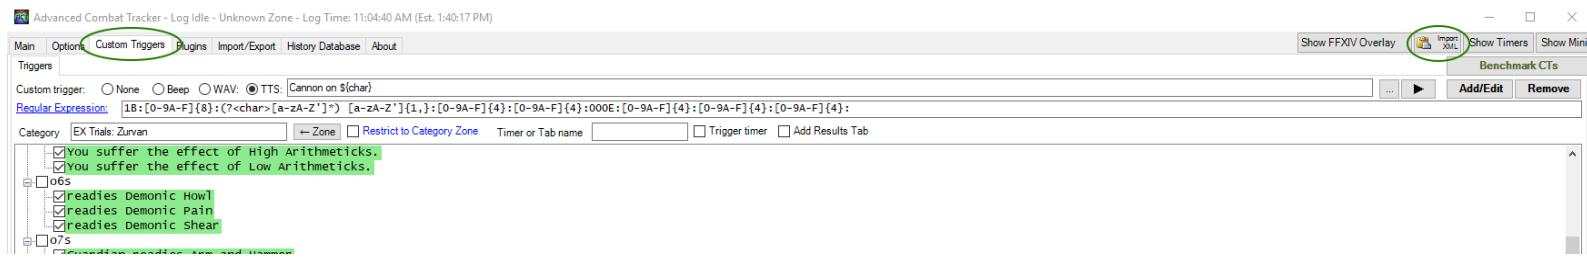

Many of these triggers are sourced from other posts and years of other people's work. This document was created with the intent to gather all of these triggers in one place, so you don't have to skim through tons of old posts trying to find old triggers (and God forbid you to have to try to search Reddit). All of the triggers pulled from another's work are sourced in the credits section, some may have been forgotten so if you find one that had an original source let us know via PM at [/u/thatoneguyyouknow3](#) or [/u/yitsy](#) on Reddit! The same goes for if you have some triggers for old content or some really cool ones that can help in fights, let us know so we can add them.

All of these triggers have been slightly modified to be consistent across fights, and ACT trigger groups to keep things tidy in Advanced Combat Tracker. They also all, by default, use a consistent TTS readout for similar/identical mechanics across all fights. If you want some fun .wav files for spicing it up (or weeb TTS, and maybe even some add-ins), see the [Supplementary Information](#) section.

Some triggers are specific to certain methods of doing a mechanic and will be tagged with a yellow highlight, modify these as needed to match your strategy. Triggers that are a work in progress, or are untested are marked with a red highlight.

How to Trigger

- 1) Install ACT from the [Supplementary Information and Add-ins](#) section
 - a) Install the [FFXIV parsing plugin](#), and optionally configure it for [FFLogs uploading](#) guidelines
- 2) Copy one of the triggers, and open up ACT
- 3) Once ACT is open, navigate to the “Custom Triggers” tab and hit “Import XML”
 - a) It’s recommended to disable triggers for content you don’t intend to be running by unchecking the group for it. Having too many (in my anecdotal experience) has sometimes caused triggers to not fire.

FFXIV Parsing Plugin

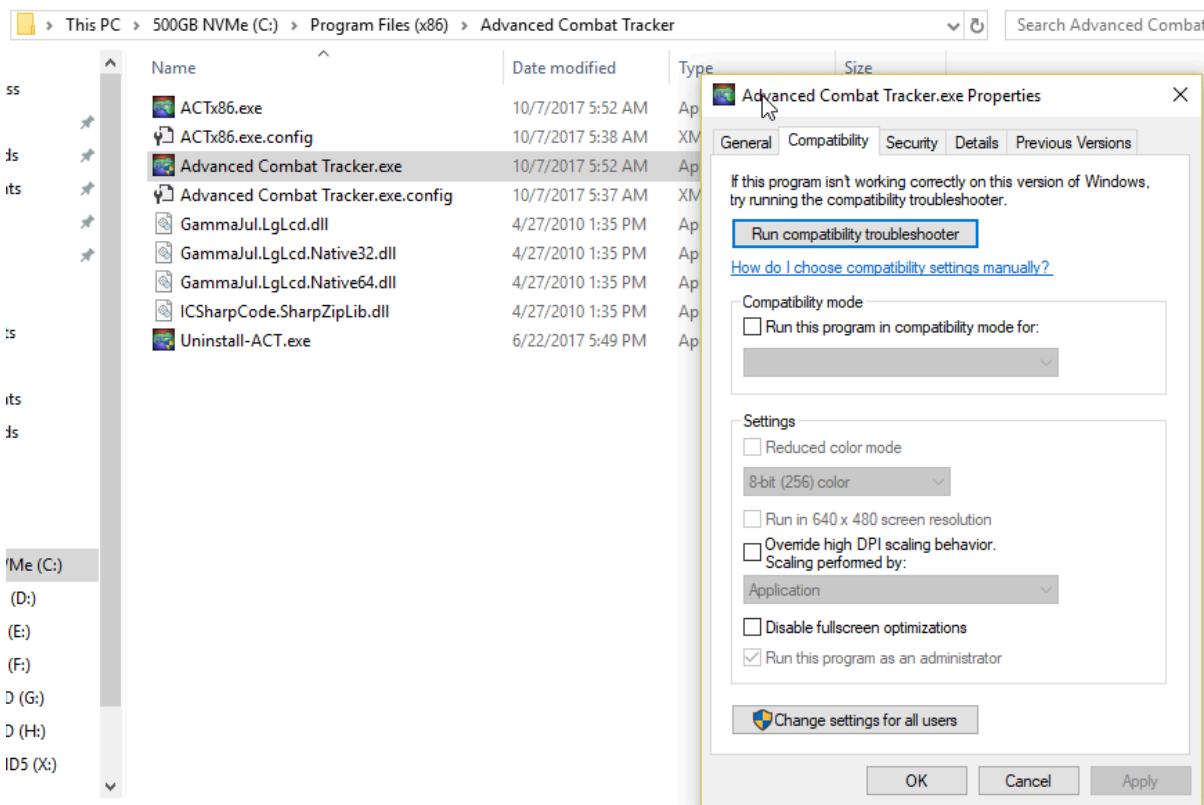

https://github.com/ravahn/FFXIV_ACT_Plugin

Configuring ACT for FFLogs uploading

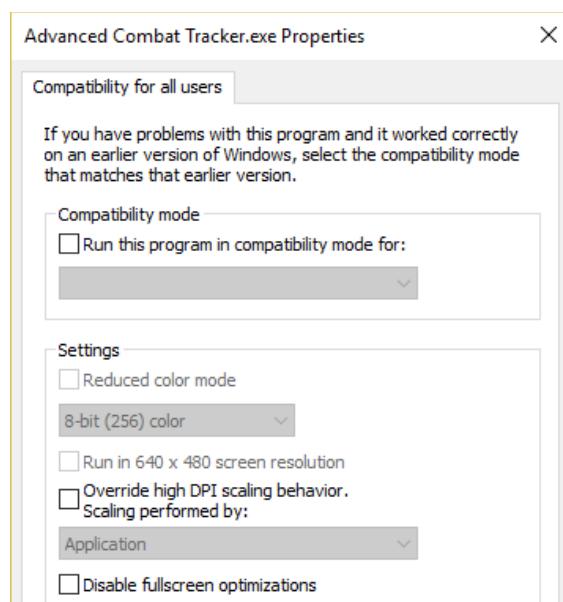

Find your ACT executable, usually at "C:\Program Files (x86)\Advanced Combat Tracker\Advanced Combat Tracker.exe"

Right click, properties

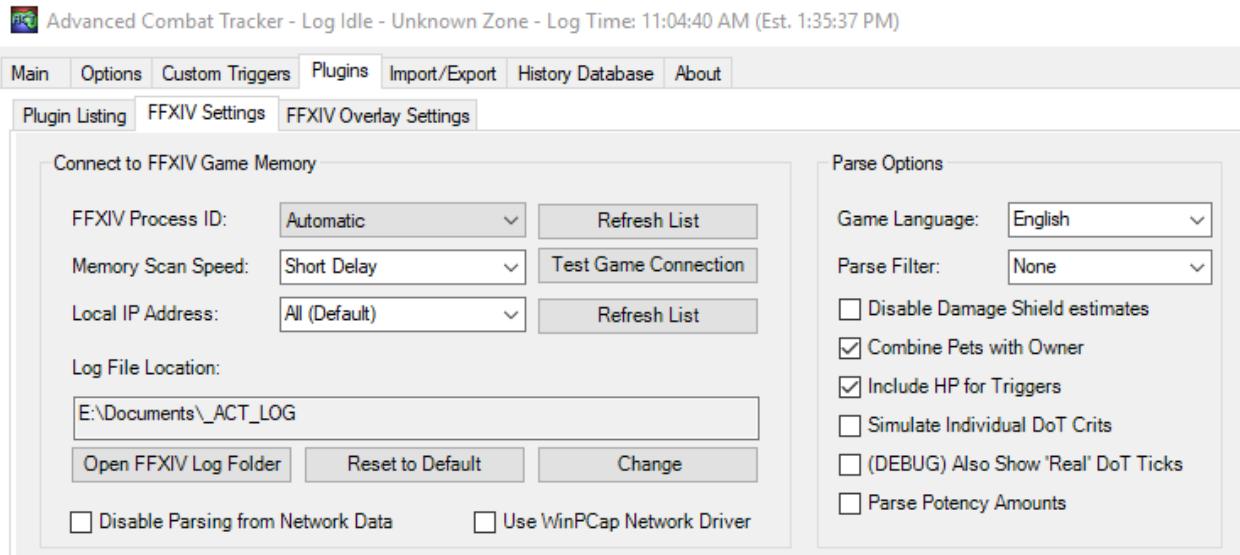

Navigate to the Compatibility tab, and click "Change settings for all users" at the bottom

Select “Run this program as an administrator” and hit OK a few times to close all your dialogue boxes

Make sure the FFXIV parsing plugin is configured as pictured below. The log file location can be changed to wherever you want to keep them. You can configure “Parse Filter” as you want to exclude people outside your party/alliance/you.

Yukkuri TTS

Yukkuri is an ACT plugin that gives you multiple options for a weeb tts voice. Go to the link below and follow the screenshots below.

インストール

ALL-IN-ONE インストール

ALL-IN-ONEインストーラ「Actor」を使用してACT本体ごと簡単に導入できます。設定も引き継がれますのでこの方法でのインストールをお勧めします。

Extract the file you downloaded. The “ACT” folder in the extracted location has everything you should need to run ACT and some extra plugins you may find useful, like Yukkuri (If you already have ACT installed then you will need to move the plugins from the extracted “ACT” folder to your directory where you installed ACT or just delete your old ACT install and run ACT from the extracted folder from now on). Except the FFXIV plugin is probably outdated. Make sure you get the latest one. Run the “Actor.exe” application to have all the prerequisites installed that you need in order to run the Yukkuri TTS plugin. Waifu Warrior recommends using the “HOYA VoiceText Web API” option (screenshot below) because Hikari is best TTS waifu.

You can get a free API key easily by clicking on that blue text that says “Register for free use” and filling out the stuff you need to on the web page that pops up (more detailed instructions below). Now your ACT triggers will play with a weeb voice when the “TTS” radio button is selected.

How to get an API Key

1. Start by visiting this website https://cloud.voicetext.jp/webapi/api_keys/new or clicking API Key

2. Fill out 3 out of the 4 boxes. You must use a real email address in order to obtain an API key!

How to Set Up Spell Timers

This is an excellent feature for bards that forget when to cast their next song. If you can't keep 100% uptime with your music, this may help!

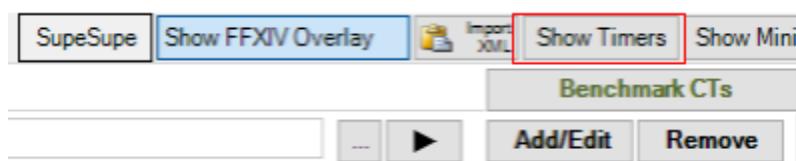

- In your battle menu on Final Fantasy XIV, look at the cast line. Example: You Cast The Wanderer's Minuet

- In Advanced Combat Tracker, add the cast phrase to Regular Expressions. In the Timer or Tab Name, give it a short, recognizable name, and check the trigger timer.

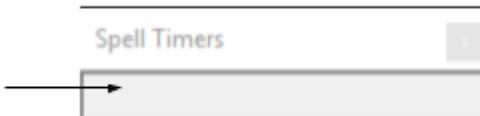

- Go to Show Timers:

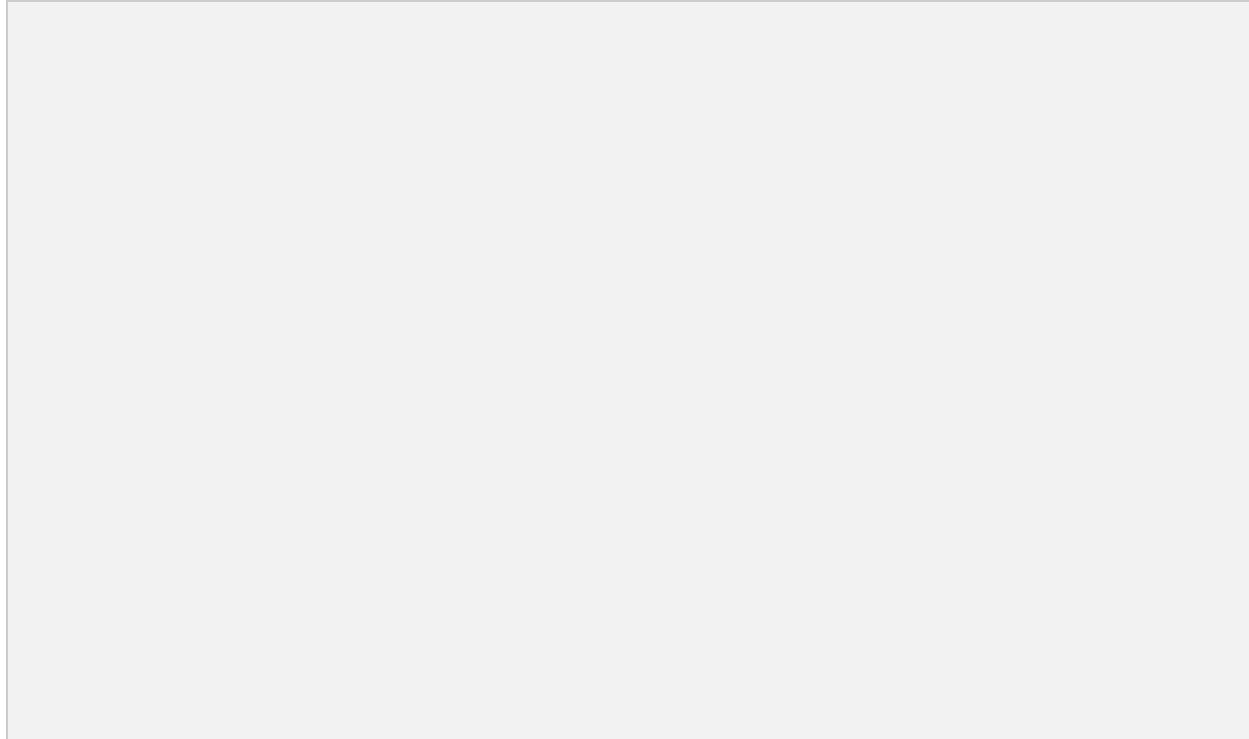

- You will have to right click this box to open Spell Timer (Options):

Right click
Here

5. In the Spell Timers Menu you will need to change these things:
 - a. **AE/SKILL/XXX** - This refers to the Timer or Tab Name you made earlier
 - b. **Timer/Warning/Remove Timer** - How long the timer trigger is (bard songs are 30 seconds), When you want to be notified to cast the spell again/next spell, and when to remove the timer (I have this set at 0)
 - c. **For the checkboxes** - We suggest using Restrict Timers, Allow Timer Mods to Effect, and Display in Panel A
 - d. **Restricted Timer Whitelist** - We suggest adding either Player or You and Your character Name
 - e. **Custom Warning Sound** - Press the [...] and select text to speech and then fill in what you would like the trigger to state.
 - f. **Custom Tooltip** - This should be auto-populated if not make it the same name as the AE/Skill field
 - g. **Add/Edit** - Don't forget to save your hard earned work!
 - h. **Remove** - Allows you to remove if you messed up!

Congratulations! You will never forget to play the next song again.
