1. Banking use case

It is described in this use case how a consumer may enter into his or her net banking account and utilise the Bill Payment Facility.

The consumer will be able to view a dashboard including all of the outstanding invoices from all of the registered billers. He has the ability to add, change, and remove biller details. For different billing activities, the client can set SMS and email notifications to be sent to them. He has access to the history of previously paid invoices.

The people who initiate this use case are bank clients or customer service representatives.

2. Car Parking

Customers may request that the camera system be included with a rear-view camera feature, which will assist them in parking their vehicle. The buyer may additionally request the Trailer hitch function, which operates in conjunction with the back camera.

If a client specifies that the rear-view camera for parking assistance must be operational at all times without exception, then the Trailer function will never be operational, and vice versa for the Trailer feature.

3. Acquisition ordering platform

To place a bid on an Auction product in the Acquisition ordering platform, I must first pick it in the Acquisition ordering platform as an Acquisition Gateway User.

4. Marketing Lead

As a Marketing Lead, I would like to have access to a content management system that would allow me to manage and offer high-quality material and an engaging experience to my audience.

5. HR Manager

As a human resources manager, I would want to have access to a virtual job posting board so that I can keep track of job opportunities and manage the company's people needs.
