

PUBLICACIONES

- (2025) *Toxicology Mechanisms and Methods*. The role of tetrahydroxyquinone solubility on apoptosis induction in human colorectal cells. Recuperado de <https://doi.org/10.1080/15376516.2024.2443455>
- (2024) *Journal of Functional Morphology and Kinesiology*. Comparing the Pressure on the Carpal Tunnel When Using an Ergonomic Pointer Driver and an Optical Alternative. Recuperado de <https://doi.org/10.3390/jfmk9040260>
- (2024) *Pharmaceutics*. Synergistic Strategies in Prostate Cancer Therapy: Electrochemotherapy and Electromagnetic Hyperthermia. Recuperado de <https://doi.org/10.3390/pharmaceutics16091109>
- (2023) *Materials Chemistry and Physics*. Effect of titanium substitution on magnetic and dielectric properties of BaFe₁₂O₁₉ ceramics prepared by solid-state and co-precipitation methods. Recuperado de <https://doi.org/10.1016/j.matchemphys.2023.127831>
- (2022) *Journal of The Electrochemical Society*. An Innovative Approach to Produce Magnetite Nanoparticles Synthesized by a Combined Electrochemical and Chemical Coprecipitation Method and their Electrochemical Monitoring. Recuperado de <https://doi.org/10.1149/1945-7111/ac7bad>
- (2022) *Revista Mexicana de Física*. Analysis of the magnetic properties of core-shell iron oxide nanoparticles. Recuperado de <https://doi.org/10.31349/RevMexFis.68.041004>
- (2022) *Foods*. Dry but Not Humid Thermal Processing of Aloe vera Gel Promotes Cytotoxicity on Human Intestinal Cells HT-29. Recuperado de <https://doi.org/10.3390/foods11050745>
- (2022) *Materials*. A Ferrofluid with High Specific Absorption Rate Prepared in a Single Step Using a Biopolymer. Recuperado de <https://www.mdpi.com/1996-1944/15/3/788>
- (2022) *Molecules*. A Ferrofluid with Surface Modified Nanoparticles for Magnetic Hyperthermia and High ROS Production. Recuperado de <https://doi.org/10.3390/molecules27020544>
- (2020) *Measurement Science and Technology*. A dynamic hysteresis meter for studying ferrofluids designed for magnetic hyperthermia. Recuperado de <https://doi.org/10.1088/1361-6501/ab6521>

- (2020) *Materials*. Photocatalytic Degradation of Diclofenac Using Al₂O₃-Nd₂O₃ Binary Oxides Prepared by the Sol-Gel Method. Recuperado de <https://doi.org/10.3390/ma13061345>
