Wednesday's
2:30-3:30pm
Club Description: The Wellesley High School chapter of Girls Who Code aims to foster a safe, welcoming, and judgment-free space for girls to learn and pursue computer science. As an end goal, we hope to see more girls continue learning computer science in the higher-level classes, which are currently male-dominated. This year, we will learn more programming languages and involve our community more, whether that is partnering with local nonprofits or doing programming-related activities led by community members.
