

By Tarun

I am thrilled to share my latest endeavor: Developing the Official MicroProfile API Tutorial in collaboration with the MicroProfile Working Group.

As the landscape of cloud-native development evolves, equipping developers with the knowledge and skills to navigate these changes is essential. The Official MicroProfile API Tutorial is being created to meet this need, offering a comprehensive resource for developers at all stages of their journey.

This initiative is a collaborative effort, and the support of the MicroProfile Working Group has been invaluable. I am deeply grateful for the opportunity to contribute content to the MicroProfile community. I am eager to see how these tutorials will evolve with the collective input and expertise of the community.

I invite you to join us on this journey at <https://github.com/ttelang/microprofile-tutorials> and [#847](#). Your insights, feedback, and contributions are essential to creating a comprehensive and enriching learning resource. Together, we can shape the future of enterprise Java microservices.

I extend my heartfelt gratitude to [Reza Rahman](#), [Clark Roundy](#), [Kito Mann](#), [Emily Jiang](#), [John Clingan](#), [Amelia Eiras](#) and many other MicroProfilers for their invaluable support and guidance as I embark on this journey.

Stay tuned for more updates about our progress!
