

Preschool Science:
Ice

Draw a picture of ice.

Is ice **hot** or **cold**?

What does ice look
like after it melts?

Have the kids help you prepare 3
cups (warm water, cold water, cold
water with salt).

Talk about it: What do you think is
going to happen if we put a piece
of ice into each cup?

Experiment: Place a piece of ice
into each cup.

Results: What happens to the ice?
Why?

Circle the cup where the ice
melted the fastest.

Circle the cup where the ice
melted the slowest.
