

Climate Education Campaign

Dear present and future **Vice-Chancellor (Dr Anthony Freeling and Professor Deborah Prentice)**,

The Issue

Climate change is humanity's greatest threat as we are on track for global temperatures to rise by more than double the [1.5-degree](#) mark, which causes [severe storms, drought, rising oceans and species extinction](#). Yet Cambridge University courses rarely engage with this crucial challenge! A recent study by Cambridge Zero revealed that only 26% of students thought Cambridge University offered sufficient sustainability courses. Furthermore, [Students Organising for Sustainability](#) reported that 80% of students in the UK want their universities to do more on sustainable development. How should we aspire to contribute to climate solutions if we lack access to educational climate resources?

Cambridge students strongly demand an increase in climate change education and integrated climate change modules. Student dissatisfaction with the lack of climate change education is spread across all courses such as Natural Sciences (51% of students), School of Clinical Medicine (64%), Schools of Arts and Humanities (50%) and School of Technology (46%). This survey revealed student requests for integrating topics such as chemical and physical climate science, climate change solutions, and environmental policy.

We Demand

- The University of Cambridge integrates climate change education within **undergraduate, graduate and PhD courses**, increasing student engagement with climate change solutions.
- Courses that highlight **climate justice as decolonial** by integrating decolonised teaching within existing course topics and materials.
- Embedding of **subject-specific climate change modules in all degrees** and across all university departments that are tailored towards the professional and personal needs of students in the context of climate change.
- Additional **stand-alone climate change courses** that are offered to all students free of cost through a Climate Change Education Centre.
- **Induction Climate Change modules** offered to all students as part of undergraduate, postgraduate and PhD degree inductions.
- A **Climate Change Science and Policy undergraduate degree** and tripos so that undergraduate students can pursue degrees dedicated to the theory and practice concerning climate change
- A **Youth Advisory Board** composed of student representatives across all subjects and degrees to voice student demands and concerns to ensure that the climate change modules reflect student demands
- A **Citizens Assembly** where dialogue between students, lectures, and university departments are facilitated to ensure that all stakeholders form collective aims and support for the climate change modules
- **Capacity Building for lecturers** to ensure that lecturers across all subjects have the skills and knowledge required to teach subject-specific climate change modules

By signing this letter, you are calling on the Vice Chancellor to increase student empowerment and engagement with climate change through integrating climate change education within undergraduate, graduate and PhD courses!
