

Hi! I need sprites for the following:

1. The player: the player is a brick that comes alive. The animations that I want are:
  - a. Player alive animation: brick lying horizontally then becoming alive and vertical
  - b. Player movement and jump animation: notice the effects when the brick moves, jumps and falls

- c. Double jump glitch effect:

- d. Player dead animation:

2. Balls: in the gifs above, the ball has saws around it. I don't want the saws, just plain red balls rotating. However, I want the ball disappear animation that is shown above (the ball turns green and pops out of existence). Also, I don't want the coins.
3. Normal bricks: same as player bricks, but in different colors. Only one animation needed here, the pop out of existence one. One brick should be longer in length and narrower in height, like a paddleboard.

As you can see, the actual sprites are simple, only the effects would take some work. Please keep that in mind while quoting the price.
