

As an expert academic librarian, I'm happy to help you come up with sociology research paper topics related to climate change. Here are 10 topic ideas that combine sociological perspectives with climate change issues:

1. Social inequalities in climate change vulnerability and adaptation strategies
2. Climate change denial: Sociological factors influencing public perception and skepticism
3. The role of social movements in shaping climate change policy and public awareness
4. Gender dimensions of climate change impacts and responses in rural communities
5. Climate migration: Social integration challenges for climate refugees in host communities
6. Intergenerational justice and climate change: Sociological perspectives on responsibility and action
7. The impact of climate change on indigenous communities: Cultural preservation and adaptation
8. Social networks and the diffusion of climate-friendly behaviors and technologies
9. Climate change and social conflict: Examining the relationship between environmental stress and societal tensions
10. Corporate social responsibility in the era of climate change: A sociological analysis of business responses

These topics explore various sociological aspects of climate change, including social structures, inequalities, cultural factors, and human behavior. They also align with current research trends in environmental sociology and climate change studies.

When selecting your topic, consider:

1. The availability of existing research and data on your chosen subject
2. The relevance of the topic to current sociological debates and climate change discussions
3. Your personal interests and strengths in sociological analysis

Remember to narrow down your chosen topic to a specific research question that can be addressed within the scope of your paper. This will help you focus your research and develop a clear argument.
