Governance Team Roadmap

Note: This roadmap is flexible and evolving. If a feature is absent from this roadmap it doesn't necessarily mean we aren't interested, it could just mean that no one has mentioned it yet or that no one has volunteered to do it. Projected time frames will also change as people step up/down to/from projects.
Right click on a table row and choose Insert row (above or below, doesn't matter) to add a new item to the roadmap.

Short Term - means finishing soon (regardless of size of project). Any size project could slide on to the Short Term list when the end of it is not far away.

Project	Status	Notes	Firmness	Who's working on it
Create a Docker Hub repository	In progress ⏷	3 out of 13 Community Edition repositories added.	Very Firm ⏷	Imaginer
Comment on the KHR_avatar proposal	Not started ⏷	If the standard requires particular names for bones and how they connect, it would be a priority for us to implement. If the standard does not, we would only implement sets of bone names and connections once they had a large pool of avatars our users could draw on. We support the Reference Canonical Skeletal Framework and feel it provides a good framework for skeleton and avatar interoperability between platforms in the comment on the KHR_avatar proposal.
