

STOP WATER POLLUTION

Do you ever wonder where your trash goes? Well all your trash goes into the sea and that's a bad thing because it causes water pollution. In my opinion I believe that we should stop water pollution. I strongly believe that we should stop water pollution because marine animals are dying. Another reason I think we should stop water pollution is because humans, animals and plants in the ocean or sea need clean water to survive. The last reason I believe it is important to stop water pollution is because oceans and seas absorb carbon dioxide.

One reason we should stop water pollution is because animals are dying. For example, did you know If we don't stop water pollution in 30 years there would be more plastic in the ocean than fish. Another example is, one time when I was playing with my brother I saw a fish eat a piece of plastic that's bad because it can't digest the bottle and it can die. This shows that we are destroying the oceans and seas.

Another reason we should stop water pollution is because us, animals and plants in the ocean or sea need water to survive. For example, did you know 100 million animals die each year because of water pollution. Second example is, one time I was swimming in the sea but not that far. I saw a lot of dead plants in the sea and I noticed that it was because of water pollution. This made me think if there would be any more animals left in twenty years if we don't stop water pollution.

The final reason we should stop water pollution is because oceans and seas absorb carbon dioxide. For example, did you know that the ocean collects 50 times the amount of CO₂ than the atmosphere. The second example is that, did you know that oceans help take away greenhouse gases. This made me think if we do not stop water pollution and 50 years come there might not be any more living things in the world.

Some people might say that water pollution is nothing, but I think that water pollution is bad because it kills coral reefs, marine animals, and many plants in the sea or ocean. In conclusion, I believe that we should stop water pollution. One reason is because animals are dying. Another reason I think we should stop water pollution is because humans, animals and plants in the ocean or sea need clean water to survive. The last reason I think we should stop water pollution is because oceans and seas absorb carbon dioxide. So, are you ready to help stop water pollution by reducing, reusing, and recycling?
