ABSTRACT

A well-prepared abstract enables readers to quickly and accurately identify the basic content of a document, to determine its relevance to their interests, and thus, to decide whether to read the document in its entirety. The abstract should include the background, novelty, objectives, methods, results, and conclusions. The abstract should be 150–250 words in length. It is written in single-spaced, italicized text using a Times New Roman font in 10 point size. Standard nomenclature should be used, and abbreviations should be avoided. The literature should not be cited. The keyword list provides the opportunity to add keywords used by indexing and abstracting services in addition to those already present in the title. The judicious use of keywords may increase the ease with which interested parties can locate our article.

INTRODUCTION (Heading 1)

Jurnal TRANSFORMATIKA is a peer-reviewed journal published twice a year (in January and July) in Indonesian and English. The aim of Transformatika is to publish high-quality articles on the latest developments in the field of Information Technology. Transformatika focuses on intelligent systems and informatics. The article presents new knowledge, empirical

observation, result of the study and development or proposition of new ideas which are written in novelty of research

Manuscripts can be written in ENGLISH or INDONESIAN. The article title, affiliation, abstract, and keywords must be written in English. The authors are required to follow these instructions. The length of the manuscript should be not less than 3500 words (excluding the abstract, author information, and references). The minimum number of references is 15–20, with at least 80% from primary sources (journal articles) published within the last 3–10 years. If the authors do not meet these requirements, the article will be rejected during the initial desk evaluation.

The manuscript should be written in the IMRaD format and typeset on standard A4-size paper (21 cm × 29.7 cm) in a one-column and one-space format. The margins should be as follows: left: 3 cm, top: 4.24 cm, right: 2.75 cm, and bottom: 3.5 cm, using Times New Roman 11 pt font with 1 line spacing and a maximum of 15 pages. The easiest way to prepare a manuscript for Journal Transformatika is to directly edit this paper template and fill in the author details.

Citations are written using sequential numbering from one to the last reference [1]. Writing a reference can involve several references [2]–[5]. The format for writing a reference is the IEEE format [3], [4]. The IEEE format is used in the References section of this template [1], [6]–[9].

The Introduction should explain why the research is important and necessary by describing the problem or situation that motivates the study. This section must comprehensively cover the research background, identification and limitation of the problem, formulation of the solution, and a review of relevant literature and previous studies, with priority on references from journal articles or scientific publications published within the last three years. The authors must clearly reveal the “gap” in the current research and explain how the present study provides a solution through its novelty, objectives, and significance. If the study includes hypotheses, they are presented at the end of this section. The introductory content should generally cover 10–15% of the entire paper. Note that tables are not allowed to be embedded within this section; any data or information that would typically be in a table must be presented as descriptive sentences.

RESEARCH METHODS (Heading 1)

The Methods section describes the chronological conduct of the study and provides sufficient detail to meet the "gold standard" and enable readers to replicate the research. This section explains the research design and the specific steps taken to solve the problem, including the population, sampling techniques, and data acquisition materials. The authors should clearly detail the research procedures, presented in the form of algorithms, pseudocode, or other systematic formats, as well as the equipment and methods used for testing the model. Typically the least-read section of an IMRAD report, it should be written in the past tense and frequently utilize the passive voice. To enhance clarity and organization, the use of subheadings/subchapters is highly encouraged to separate the information regarding participants, instruments, and procedural steps. The Methods section should generally cover 30 %–35% of the entire paper.

1. Sub Chapter (Heading 2)

This is an example of the use of sub-chapters in a paper using Heading 2. Sub-chapters are allowed in all chapters except the introduction and conclusion.

1.1. Sub-Sub Chapter (Heading 3)

This is an example of the use of sub-sub-chapters in a paper using Heading 3. Sub-sub-chapters are allowed to be included in all chapters, except in the introduction and conclusion. To show sequences or levels of each sub-chapter or sub-sub-chapter, it can be preceded with a bullet (a, b, c, etc.) section, as follows:

a. States the first point
b. States the second point, etc

The format can be automatically presented by utilizing the bullet and numbering features provided in the Microsoft Word toolbar.

RESULTS (Heading 1)

In this section, present your research findings clearly using figures, graphs, or tables to ensure reader comprehension. This section should focus strictly on the findings without additional commentary and must be written in the past tense. Ensure that all visual elements are labeled and numbered separately, and place captions above tables and below figures. Although the results are presented here, they should be accompanied by a comprehensive discussion that interprets these findings. The Results section should generally cover 25 %–30% of the entire paper.

1. Table

Text inside tables should be left-aligned, written in Times New Roman, and single-spaced. Tables should be created properly using the **Insert → Table** menu in Microsoft Word, and the number of rows and columns should be adjusted to fit the data. Each table must be referred to in the main text, for example," *...as shown in Table 1.*" Note that the word **Table** should be capitalized. Tables should always be integrated with the surrounding discussion and must not appear separately from the text or stand alone without explanation. An example of the table design is shown below.

Table 1. Table title, use Sentence Case (capitalize each initial letters), Center text

No.	this line	Bold
1	Table of contents: If necessary, you can reduce the font size to 8 points. Do not reduce it further, as it will be difficult for the reader.	Regular font tables of contents

Table 2. The Performance of ...

Variable	Speed (rpm)	Power (kW)
x	10	8.6
y	15	12.4
z	20	15.3

Tables that do not fit on a single page should not be split across pages. When a table must continue onto the next page, the header row should be repeated, and the same table number should be retained. In such cases, the table number may replace the title when referring to the

continuation. Table titles should not end with a period. A table wider than one column should be positioned at the top or bottom of the page, whereas a narrower table may be placed more flexibly depending on the placement of the related text.

2. Figure

As with the tables, each figure must have a serial number and title. The figures should be professionally drawn and not enclosed in a frame. Black and white images are recommended. Figure files may be named using the format "caption, Gambar/Tabel.". Each figure must also be referred to in the text, either in the preceding or following sentence, for example: *"...as shown in Figure 1, the macro security had to be set to medium."* Note that the word Figure should be capitalized. Figure titles should not end with periods. Figures wider than one column should be placed on the top or bottom of the page, whereas narrower figures should be positioned more freely.

However, small figures should not be placed before the related explanatory text. Instead, they should appear close to the sentence discussing them.

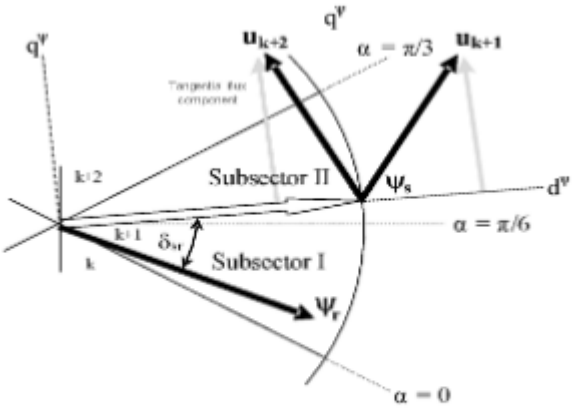

Figure 1.The title picture, also using sentence case, Center text

(Capitalize the initial letters)

3. Equation

Mathematical equations should be prepared using **Microsoft Equation** or an equivalent editor. This feature can be accessed through **Insert → Object** or **Insert → Equation**, depending on the version of Microsoft Word. If the equation editor is unavailable, it may need to be installed.

$$\sum_{i=1}^{n} i = \frac{n(n+1)}{2} \quad (1)$$

Equations should be displayed clearly and numbered consecutively throughout the manuscript. Equation numbers should be written in parentheses and aligned with the right margin. When referring to an equation in the text, use the format *Equation (1)*, *Equation (2)*, etc..

Variables should be written in an appropriate mathematical style, and indices should be clearly distinguished from the main symbols.

4. Algorithms or Program Listings

Algorithms and program listings should be consistently formatted and presented as part of the manuscript in a clear and readable manner. Although they may be treated similarly to figures in terms of numbering and referencing, they should use a distinct font, typically **Courier New**, with a maximum size of 10 pt. As with tables and figures, algorithms or program listings must be referred to in the main text and should not appear without a contextual explanation.

DISCUSSION (Heading 1)

In this section, summarize and interpret your main findings by describing whether they represent new discoveries, modifications, or support for established theories. The authors must connect their results to previous research and provide a critical analysis of the study limitations. These limitations should be used as a basis for suggesting specific directions for future research. The discussion should be presented as a cohesive narrative that builds a deep understanding of the research results. The Discussion section should generally cover 15 %–20% of the entire paper.

CONCLUSIONS AND RECOMMENDATIONS (Heading 1)

The conclusion is not a mere summary but a concise and impact-driven final argument that solidifies the paper's contribution. It should clearly state the value of the research based on the results and discussion, while outlining the prospects for further development. The authors should provide forward-looking recommendations that highlight the practical application of the findings and suggest specific directions for future studies. The Conclusion content should generally cover under 5% of the entire paper

STATEMENTS AND DECLARATIONS (Heading 1)

Author Contributions: example: **[author]** and **[author]** conceived and designed the research methodology; **[author]** curated data, performed the simulations, and wrote the original manuscript draft; **[author]** developed software algorithms and validated experimental performance; **[author]** provided supervision, funding acquisition, and critical review and editing of the final manuscript. All authors have reviewed and approved the published version of the manuscript.

Declaration of AI in Scientific Writing

(In case of AI usage for proofreading/grammar editing):
Declaration of Generative AI in Scientific Writing: example: During the preparation of this manuscript, the authors utilized [AI Tool] solely to enhance English grammar clarity and sentence structure readability. Following this tool's usage, the authors thoroughly reviewed, verified, and edited the resulting text, and they accept full academic and ethical responsibility for the content of the published article.

(In case of no AI tools used):

Declaration of Generative AI in Scientific Writing: example: The authors confirm that no generative artificial intelligence (GenAI) or AI-assisted technologies were used in the research conception, data generation, code development, or manuscript drafting.

Funding Statement

(If funded):
Funding Statement: example: This research was funded by [Funder] under [Contract Number].

(If unfunded)
Funding Statement: example: This research received no specific grant from any funding agency in the public, commercial, or not-for-profit sectors.

Conflict of Interest: example: The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work or conclusions reported in this paper.

Ethical Clearance *(Optional)*

(If not involving human subjects):
Ethical Clearance: example: Not applicable. This study does not involve human participants, clinical trials, animal testing, or personally identifiable data.

(If involving human subjects):
Ethical Clearance: example: The study protocol was approved by [Approver], Approval No: [Approval Number].

Acknowledgments *(Optional)*: example: The authors thank [ ] for [ ].

REFERENCES

The main references must consist of international journals and proceedings. All references should be to the most pertinent and up-to-date sources. References must be written in IEEE style. Each citation is indicated by a number in square brackets (e.g., [1]), numbered sequentially in the order of their first appearance in the text. Please maintain a consistent format for all references; see the examples below.

If your references are from Journal Articles:

[1] A. Author and B. Author, "Title of article," Journal Title, vol. x, no. x, pp. xxx-xxx, Month Year, doi: xxx.
[2] D. Casadei, G. Serra, and K. Tani, "Implementation of a direct control algorithm for induction motors based on discrete space vector modulation," IEEE Transactions on Power Electronics, vol. 15, no. 4, pp. 769-777, Jul. 2000, doi: 10.1109/63.849048

If your references are from Proceeding Articles:
If the proceeding consist of several volumes

[3] A. Author and B. Author, "Title of paper," in Title of Proceedings, vol. x, Editor, Ed. City, Country: Publisher, Year, pp. xxx-xxx, doi: xxx.

Note:
Please carefully check your paper for spelling and grammatical errors before submission.

SUBMISSION CHECKLIST (MUST BE INCLUDED IN THE ARTICLE FILE)

All components must be marked with an X before being submitted to Jurnal Transformatika to ensure that the manuscript is well-prepared and follows the template. Place an X in the Author column after checking each component.

General Format			**Mark (X)**	
No	**Component**	**Component Details**	**Author**	**Editor**
a.	Template	Using the official journal template.		
b.	Layout	A4 paper		
		Margins of left: 3 cm, top: 4.24 cm, right: 2.75 cm, and bottom: 3.5 cm		
		Times New Roman text, 11pt, single line spacing		
c.	Author Identity	Full names of all authors		
		Name of institution/affiliation, address of institution, telephone/fax of institution/affiliation, and email of all authors		
		The telephone number and email address of the corresponding author are clearly stated.		
d.	Length of Manuscript	Range 7-15 pages or minimum 3500 words (excluding abstract and references)		
Title & Abstract			**Mark (X)**	
No	**Component**	**Component Details**	**Author**	**Editor**
a.	Title	Maximum 10 words in English		
		Bold, Arial, 16pt, Sentence Case		
		The title is in line with the focus of the manuscript		
b.	Abstract Quality	Times New Roman text, 10pt, single line spacing, 100-250 words long		
		The abstract contains background, novelty, objectives, methods, results (main findings), conclusions & implications.		
c.	Keywords	Consists of 3-5 words, separated by semicolons (;)		
Substance Structure			**Mark (X)**	
No	**Component**	**Component Details**	**Author**	**Editor**

a.	Introduction	Includes research urgency, problem identification/limitations, and a state-of-the-art literature review (prioritizing the last 3 years). It explicitly states the research gap, novelty, and objectives.		
b.	Methods	Describes the research design, population/sampling, and data acquisition in a chronological manner to ensure replicability. It includes systematic procedures such as flow, algorithms or pseudocode, written in the past tense and passive voice.		
c.	Results	Findings are presented objectively through text, tables, and figures without commentary. All visual elements must be labeled and numbered separately, with table captions placed above and figure captions placed below.		
d.	Discussion	Provides a comprehensive analysis by comparing results with previous research and established theories. It critically addresses research limitations and provides concrete suggestions for future research directions.		
e.	Conclusion and Recommendation	Presents an impact-driven final argument that solidifies the research value and contribution. It outlines the prospects for further development and the practical application of the findings.		
Technical Elements			**Mark (X)**	
No	**Component**	**Component Details**	**Author**	**Editor**
a.	Image/Figure	High resolution (min 300dpi), no border, caption below image. Information in the image uses English and standard dot (.) for decimal.		
b.	Table	Three-line table format (without vertical lines), title above the table. Use a period (.) for decimals.		
c.	Equation	Using the Equation tool editor (not the image), numbering on the right side.		
d	Pseudocode/Algorithm	Pseudocode must be presented in a monospaced font, properly labeled and numbered as an algorithm, and accompanied by a self-contained textual explanation that clarifies its key logic without requiring a separate code reference.		
d.	Object Citation	All Figures, Tables, Pseudocode, and Equations are cited in the text using numbers (not the words "above" or "below").		
References (IEEE Style)			**Mark (X)**	
No	**Component**	**Component Details**	**Author**	**Editor**
a.	Citation Format	Using a numbering system in square brackets, for example: [1].		

b.	Source Quality	Minimum 15 references. 80% of which must come from the most recent journals/proceedings, no more than within the last 3-5 years.		
c.	Writing a Bibliography	The journal name is written in full (not abbreviated), including Volume, Number, Page, and DOI.		
d.	Citation Ethics	Self-citations should not exceed 3. Book sources should be a maximum of 20%.
