

Company Overview

bloxberg is a decentralized infrastructure company founded in 2019, focused on connecting traditional Science with Decentralized Science (DeSci) through trusted blockchain technology.

We empower researchers, institutions, funders, publishers, DAOs, and science-driven companies with secure infrastructure for scientific data ownership, verification, transparency, and decentralized governance.

Our expertise spans DeSci, blockchain infrastructure, Ethereum Layer 2, Web3 applications, and scientific data integrity.

Our mission is to build an open and resilient foundation for science, enabling researchers to protect, share, and govern their work independently while advancing collaboration, transparency, and access to scientific knowledge.

Our Values:

- Join a passionate group of engineers, researchers, and operators on a mission to build the next generation of AI infrastructure

- Highly competitive compensation package, including annual discretionary bonus & optimized tax structure compared to the vast majority of web3 startups
- Top 1% of benefits across the web3 startup space
- 100% of premiums covered on highest quality healthcare
- Aggressive company 401k match
- Fully remote and/or hybrid, up to you!
- Participate in virtual and in-person events
- Much much more!

Key Projects

Jackpot

It is an exciting multi-game play platform that integrates Web3 mechanics such as Play-to-Earn (P2E) alongside features like NFT avatars, token integration, and secure gaming. The platform is designed to offer players a seamless experience across multiple VR games, while fostering a dynamic and engaging gaming ecosystem. With a focus on transparency, security, and real crypto rewards, the project brings together the best of Web3 technology to create a new and immersive gaming experience.

Key Features

1. Multi-Game Play: It offers a wide variety of VR games and is expanding to include different casino and skill-based VR games.

2. Play-to-Earn (P2E): Players can earn real cryptocurrency rewards through in-game achievements and activity.

3. NFT Avatars: Players can use and customize NFT avatars that represent their unique in-game persona and may also hold in-game value.

4. Token Integration: The platform integrates tokens, enabling players to participate in governance, trade, and make purchases.

5. Secure Gaming: Built on Web3 infrastructure, it prioritizes user security and transparency, providing a trustworthy and fair environment for all players.

6. Leaderboards: Competitive players can track their performance on leaderboards, adding a competitive edge to the gaming experience.

Roadmap

- Phase 1: Launch of the core platform and initial VR games, with Play-to-Earn mechanics and NFT avatars.

- Phase 2: Expansion to additional VR games, including casino and skill-based VR games, and introduction of more NFT features.

- Phase 3: Full integration of cross-chain support, additional tokens, and advanced features like staking and governance systems.

- Phase 4: Ongoing updates with new VR game releases, social features, and strategic partnerships to further grow the ecosystem.

Open Roles

Role	Annual Salary (USD/yr)	Contractor Rate (USD/hr)	Responsibilities
Fractional CTO	$250k – $280k	$140 – $170	Strategic technical leadership, architecture design, blockchain strategy, and overall tech vision.

Role	Annual Salary (USD/yr)	Contractor Rate (USD/hr)	Responsibilities
			Part-time involvement.
Strategic Advisor	$140k – $180k	$90 – $120	Provide strategic business guidance to help drive company growth, partnerships, and long-term success.
Technical Advisor	$180K – $220K	$110 – $140	Provide expert technical guidance on architecture, technology decisions, and product development to ensure a scalable and reliable platform.
Technical Manager / PM	$210k – $250k	$110 – $140	Oversees projects, resource allocation, delivery timelines, and cross-team coordination.
Senior Product Manager	$210k – $250k	$115 – $140	Drives product vision, roadmap, and feature delivery for Web3, crypto, or blockchain-based platforms.
Head of Backend Engineering	$180k – $220k	$95 – $125	Leads backend development, API architecture, database design, and system scalability.
Senior Blockchain Lead	$200k – $240k	$110 – $140	Leads blockchain architecture, smart contract design, and high-level protocol strategies.
Backend Developer	$140k – $180k	$80 – $110	Implements APIs, databases, and backend systems to support Web3 operations, scalability, and decentralized services.
Blockchain Developer	$180k – $220k	$100 – $130	Develops blockchain protocols, Layer 2 integrations, and cross-chain functionalities.
AI Platform Engineer	$180k – $220k	$100 – $130	Designs and develops AI infrastructure and platforms to support scalable AI/ML models and data pipelines.
DevOps Engineer	$130k – $170k	$75 – $105	Manages CI/CD pipelines, cloud infrastructure, and deployment

Role	Annual Salary (USD/yr)	Contractor Rate (USD/hr)	Responsibilities
			automation for Web3 applications.
CMO / Head of Marketing	$200k – $240k	$110 – $140	Oversees global marketing strategy, branding, and customer acquisition for Web3 or blockchain platforms.
Executive Assistant	$90k – $130k	$50 – $80	Provides administrative support, manages schedules, and ensures efficient operation of executive tasks.
Operations Manager	$120k – $160k	$70 – $100	Manages day-to-day operations, logistics, and resource planning across departments.

What we Offer

- *Purpose*: The opportunity to contribute to making AI a public good
- *Growth*: A self-directed environment where you can take initiative to shape your role and career
- *Compensation*: Market-competitive compensation including, for most roles, exposure to pre-launch tokens
