Conclusion – Heading 1 (TNR, 12, Bold, Align Left, Capitalize Each Word)

This study set out to examine the relationship between digital marketing strategies and the performance of small and medium enterprises (SMEs) in Malaysia. The findings reveal that the effective use of social media, search engine optimization, and customer relationship management tools significantly enhances business visibility, customer engagement, and ultimately financial performance. Importantly, the results highlight that SMEs with proactive adoption of digital tools tend to outperform those that rely solely on traditional methods. The implications of this study are twofold. From a theoretical perspective, it contributes to the growing body of literature on SME digitalization by demonstrating the measurable impact of online strategies on organizational outcomes. From a practical standpoint, it provides entrepreneurs and policymakers with valuable insights to design training programs, incentives, and policies that encourage digital transformation among SMEs.
