

Privacy Policy

****Effective Date: July 12, 2026****

This Privacy Policy explains how TrelloBits (“we,” “our,” or “us”) collects, uses, stores, and shares information in connection with our AI chat application (“App”).

Information We Collect

TrelloBits does not require users to create an account, and we do not collect users’ names, email addresses, phone numbers, precise location, contacts, or advertising identifiers.

The App may process the following information when you use its features:

- ****Chat content:**** text messages you type into the App.
- ****Images:**** photos or images you choose to upload for image-based chat.
- ****Conversation context:**** recent chat history needed to provide contextual AI responses.
- ****AI settings:**** selected assistant, model, response mode, and related chat settings.
- ****App operation data:**** app version, request time, subscription entitlement status, and an app-generated identifier used to operate the chat service and prevent misuse.
- ****Purchase information:**** subscription and purchase status handled through Apple’s StoreKit. We do not receive or store your full payment card information.

How We Use Information

We use information only to provide and improve the App’s core features, including:

- generating AI chat responses;

- understanding uploaded images when you choose to send them;
- maintaining conversation context;
- enabling premium features and purchase restoration;
- keeping the App secure, functional, and reliable.

We do not sell, rent, or trade your personal information.

AI Chat and Third-Party AI Service

TrelloBits uses a third-party AI service to generate AI responses.

When you use AI chat, the following data may be sent to the third-party AI service:

- your chat messages;
- uploaded images you choose to attach;
- recent conversation context;
- selected assistant/model settings;
- necessary technical request information, such as app version, request time, subscription status, and an app-generated identifier.

This data is sent to:

****VisionGPT API****

****Domain:**** `api.visiongpt.cc`

The purpose of sharing this data is to generate AI responses and provide the App's chat functionality.

Before sending your chat content, uploaded images, or related context to the third-party AI service, the App asks for your permission through an in-app privacy consent prompt. If you do not agree, the App will not send your chat data to the third-party AI service.

We require third-party service providers that process data for the App to protect user data with the same or equal level of privacy protection and to use the data only for providing the requested service.

Local Storage

The App may store conversation history, chat settings, subscription status, and app preferences locally on your device so that you can continue previous conversations and use the App normally.

You may clear conversation history in the App where this feature is available, or remove locally stored App data by deleting the App from your device.

We do not store your chat history on our own user account system.

Photos and Camera

If you choose to take a photo or select an image from your photo library, the App uses that image only for the chat request you initiate.

The App does not access your photos unless you choose to use image upload or camera features and grant the required iOS permission.

Uploaded images may be sent to the third-party AI service only after you have agreed to the AI data sharing consent described above.

Purchases

The App may offer subscriptions or in-app purchases. Purchases are processed by Apple through the App Store.

We use Apple StoreKit to check purchase status, restore purchases, and enable premium features. We do not collect or store your full payment card details.

Data Sharing

We do not sell your personal information.

We may share limited data only in the following cases:

- with the third-party AI service listed above, only after your consent, to generate AI responses;
- with Apple, for App Store purchases and subscription management;
- if required by law, legal process, or to protect the rights, safety, and security of users, the App, or others.

Children's Privacy

The App is not intended to knowingly collect personal information from children. If you believe a child has provided personal information through the App, please contact us and we will take appropriate steps.

Data Security

We take reasonable technical and organizational measures to protect information processed by the App. However, no method of transmission or storage is completely secure.

Please do not enter sensitive personal information, confidential information, financial information, health information, passwords, or any information you do not want shared with the AI service.

Your Choices

You can choose not to use AI chat features that send data to the third-party AI service.

You can also:

- decline the in-app AI data sharing consent prompt;
- avoid uploading images;
- clear chat history where available;
- delete the App to remove locally stored App data from your device.

Changes to This Privacy Policy

We may update this Privacy Policy from time to time. Any changes will be posted within the App, on our website, or on the relevant app listing page. The updated policy will include a new effective date.
