

Early Blue Guide

EARLY BLUE GUIDE 101

<https://discord.com/invite/bsgh> don't forget to join BSGH!

Requirements for early blue:

- **2 spirit petals** (belt + wand allow for faster progression);
- **both star eggs used(correctly);**
- **Bubble mask (diamond preferred);**
- **31x Science Enhancement;**
- **supreme saturator(or 10 grandmaster badges)**

Make sure to read the 3.Exceptions before editing ur hive

1.PRE SSA HIVE COMPOSITION:

It is a transition hive, meaning you are using it while slowly replacing frosty bees. Some Frostys can be replaced with bubble bees.

Transitioning from early blue:

-replace frosty bees with tadpoles or buoyants (make sure to watch your ratio). Replace your ungifted frosty's first.

If you already have gifted bubbles in your hive, you can keep them and deduct them from the number of frosties

Important note: If at any point that you're using the early blue composition you get the Supreme Star Amulet, you should refer to 2.

2. POST SSA HIVE COMPOSITION

Transitioning:

Focus on replacing Frostys for tadpoles and buoyants. When you have replaced all frosties including the gifted one you can also remove the bomber bee.

Some frostys can be replaced with bubble bees.

Overfilling:

It is heavily recommended to leech on macro servers during this stage of the game to max bubble bloat.

If you already have gifted bubbles in your hive, you can keep them and deduct them from the number of frosties, as bubbles are beneficial.

After you have replaced all of the filler bees, refer to

3.EXCEPTIONS TO THE COMPOSITIONS:

- gifted vicious bee needs to be kept in the hive composition for polar quest farming and extra damage;
- bomber should be replaced after replacing all frostys
- baby bees can be replaced (1.5 gifted tadpoles per baby bee)

4.NOTES:

- don't forget to keep ur nectars up
- don't forget to macro polar power
- don't forget that these hive compositions are only filler and you should immediately start replacing frosties with buoys and tads when you get the honey!
