

## **05\_What is the expectation for acknowledging Associate PIs in publications from the study?**

We recommend, but do not mandate, that Associate PIs receive acknowledgement for their contributions in all primary outputs of a study. This acknowledgement should be in a format searchable on PubMed, allowing citation on their CVs if feasible. As per the [UK policy framework for health and social care research \(section 9.3.C\)](#), Associate PIs should be listed by name and/or by site in the collaborators or local investigators' section at the manuscript's conclusion.
