Frequently Asked Questions:

Q: Will there be an Android version?

A: We don't have plans for this currently.

Q: Does it work if I am playing Cyberpunk on console?

A: It does, but it doesn't work well at a distance. If you are far from your TV on a couch you may need to get closer to your TV for the app to be able to read the screen.

Q: Does it work if I am playing Cyberpunk in a different language?

A: Yes! As of version 1.2 we now support all 18 of the interface languages available in Cyberpunk 2077. After selecting your language in the app read the instructions that the app gives you to know which parts of the screen to include in the camera frame.

Q: How does the app work?

A: It uses the camera on your device as well as on-device text recognition to read the matrix and sequences from your Breach Protocol hacks in the game Cyberpunk 2077. It will then find the shortest possible solution among all possible permutations of the selected sequences (overlapping them where possible) and find a solution in the matrix if your buffer size permits.
