corresponding authors, add author initials)

Abstract: The abstract should summarize the research's purpose, main findings, and major conclusions. A single paragraph is about 150-200 words. For research articles, abstracts should give a pertinent overview of the work. We strongly encourage authors to use the following style of structured abstracts, but without headings: (1) Background: Place the question addressed in a broad context and highlight the purpose of the study; (2) Methods: briefly describe the main methods or treatments applied; (3) Results: summarize the article's main findings; (4) Conclusions: indicate the main conclusions or interpretations. As a result, references should be avoided.

Keywords: keyword 1; keyword 2; keyword 3 (List three to six pertinent keywords specific to the article yet reasonably common within the subject discipline.) Avoiding general and plural terms and multiple concepts (avoid, for example, 'and', 'of')

How to Use This Template

The template details the sections that can be used in a manuscript. Note that each section has a corresponding style. The section titles given are for articles. Review papers and letters article types have a more flexible structure. Remove this paragraph and start section numbering with 1. For any questions, please contact the editorial office of the journal or support@mbi-journals.com.

1. Introduction

The introduction should briefly situate the study in a broader context and emphasize why it is important. It should define the work's purpose and significance. The current state of the research field should be thoroughly examined, and key publications should be cited. Please highlight controversial and diverging hypotheses. Briefly state the main purpose of the work and highlight the main conclusions. Finally, references should be numbered in order of appearance and indicated by a numeral or numerals in square brackets—e.g., [1] or [2, 3], or [4–6].

2. Materials and Experiment Methods

The Materials and Experiment Methods should be described in detail so that others can replicate and build on the published results. New methods and protocols should be thoroughly described, whereas well-established methods should be briefly described and appropriately cited. Please keep in mind that publishing your manuscript entails making all data, materials, and computer code, associated with the publication available to readers. Please disclose any restrictions on the availability of materials or information at the time of submission.

3. Results and Discussion

Subheadings may be used to divide this section. It should provide a concise and precise description of the experimental results, their interpretation, and possible experimental conclusions. The authors should discuss the findings and how they can be interpreted considering previous research and the working hypotheses. The findings and implications should be discussed in the broadest possible context. Future research directions may be highlighted as well.

3.1. Subsection

3.1.1. Subsubsection

Numbered lists can be noted as follows:

1. First item;
2. Second item;
3. Third item.

Pointed lists look such as:

- First bullet;
- Second bullet;
- Third bullet.

The text continues here.

3.2. Figures, Tables and Schemes

All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Figure 1

Figure 1. This is a figure. Schemes follow the same formatting.

Table 1. This is a table. Tables should be placed in the main text near to the first time they are cited.

Title 1	Title 2	Title 3
entry 1	data	data
entry 2	data	data ¹

¹ Tables may have a footer.

The text continues here (Figure 2 and Table 2).

Figure 1

(a)

Figure 2

(b)

Figure 2. This is a figure. Schemes have a different format. If there are more than one panel, they should be listed as follows: **(a)** description of what is in the first panel; **(b)** description of what is in the second panel. Figures should be placed near the first time they are cited in the main text. A single-line caption should be centered.

Table 2. This is a table. Tables should be placed in the main text near to the first time they are cited.

Title 1	Title 2	Title 3	Title 4
entry 1 *	data	data	data
	data	data	data
	data	data	data
entry 2	data	data	data
	data	data	data

* Tables may have a footer.

3.3. Formatting of Mathematical Components

This is example 1 of an equation:

$$a = 1, \quad (1)$$

The text that follows an equation does not have to be a new paragraph. Please punctuate equations as if they were regular text.

This is example 2 of an equation:

$$a = b + c + d + e + f + g + h + i \quad (2)$$

The text continues here.

4. Conclusions

Conclusions should answer the objectives of research. Tells how your work advances the field from the present state of knowledge. Without clear Conclusions, reviewers and readers will find it difficult to judge the work. The main conclusions of the study may be presented in a short Conclusions section, which may stand alone or form a subsection of a Discussion or Results and Discussion section.

Supplementary Materials: The following supporting information can be downloaded at: www.mbi.com/xxx/xx, Figure S1: title; Table S1: title; Video S1: title.

Author Contributions: For research articles with several authors, a short paragraph specifying their individual contributions must be provided. The following statements should be used “Conceptualization, A.A.; methodology, A.A.; software, B.B.; validation, A.A., B.B. and C.C.; formal analysis, C.C.; investigation, D.D.; resources, C.C.; data curation, A.A.; writing—original draft preparation, B.B.; writing—review and editing, A.A.; visualization, B.B.; supervision, C.C.; project administration, X.X.; funding acquisition, Y.Y. All authors have read and agreed to the published version of the manuscript.” Authorship must be limited to those who have contributed substantially to the work reported.

Funding: Please add: “This research received no external funding” or “This research was funded by NAME OF FUNDER, grant number XXX” and “The APC was funded by XXX”.

It is not necessary to include specifics about the program or the types of grants and awards. When funding comes from a block grant or other resources available to a university, college, or other research institution, include the name of the institute or organization that provided the funding.

If no funding has been provided for the research, include the following sentence: This study received no specific funding from government, commercial, or non-profit organizations.

Acknowledgments: In this section, you can acknowledge any support given which is not covered by the author contribution or funding sections. This may include administrative and technical support, or donations in kind (e.g., materials used for experiments).

Conflicts of Interest: Declare any conflicts of interest or state, "The authors declare no conflict of interest." Authors must identify and declare any personal circumstances or conflicts of interest that could be interpreted as inappropriately influencing the representation or interpretation of reported research results. Any role played by the funders in the design of the study, data collection, analysis, or interpretation, manuscript writing, or decision to publish the results must be declared in this section. If there is no role, please state, "The funders had no role in the design of the study; data collection, analysis, or interpretation; manuscript writing; or decision to publish the results."

Appendix A

The appendix is an optional section that can contain details and data that are not included in the main text, such as explanations of experimental details that would disrupt the flow of the main text but are still necessary for understanding and reproducing the research shown; figures of replicates for experiments with representative data shown in the main text can be added here if brief, or as Supplementary data. Appendices can contain mathematical proofs of results that are not central to the paper.

References

References must be numbered in the order in which they appear in the text (including citations in tables and legends) and individually listed at the end of the manuscript. To avoid typing errors and duplicated references, please use Reference Manager Applications like EndNote, Mendeley, Zotero, etc. Where available, include the digital object identifier (DOI) for all references. In the text, reference numbers should be placed in square brackets [] and placed before the punctuation; for example [1], [1–3] or [1,3].

1. Author 1, A.B.; Author 2, C.D. Title of the article. *Abbreviated Journal Name* **Year**, *Volume*, page range.
2. Author 1, A.; Author 2, B. *Book Title*, 3rd ed.; Publisher: Publisher Location, Country, 2008; pp. 154–196.
3. Author 1, A.B.; Author 2, C.D.; Author 3, E.F. Title of Presentation. In Proceedings of the Name of the Conference, Location of Conference, Country, Date of Conference (Day Month Year).
4. Author 1, A.B. Title of Thesis. Level of Thesis, Degree-Granting University, Location of University, Date of Completion.
5. Title of Site. Available online: URL (accessed on Day Month Year).
