

### **Lead Testing Initial Test Results**

We received the results from the first round of lead testing. In accordance with statute, these results are being communicated to parents and staff.

Total test points sampled—10

- Total samples with lead detected—1 (10.0%)
- Total samples above the action level of 5 parts per billion (ppb)— 0
- See Lab sheet for individual results; ND is none detected.

#### **Immediate actions:**

None of the sample points tested above 5ppb.

### **Next steps:**

No further actions are required.

### **Health:**

## **Testing criteria:**

Each sample was tested for total lead content which includes dissolved and particulate. The elevated level is defined as a level of lead ≥ 5pbb. Sampling was conducted per EPA test guidelines by initial draw after stagnation (periods of non-use that exceed eight hours). This manner of testing is the first step in localization and is paired with follow-up flush testing to further localize the source of any elevated levels.

# **Explanation of results:**

10 test samples were submitted for testing. 1 was returned with detectable levels.

Zero initial draw samples tested ≥ 5pbb total lead.

What this means:

- -The initial sample test is used to determine if there is an appreciable amount of lead of more than 5ppb present in the outlet being tested.
- -The lab report shows that 1 outlet (test point) has lead being leached into the water during the mandatory stagnation period.

### **Remediation:**

No remediation is required at this time.
