Evmos Grant Suggestions

Last Updated: 2/21/2022

       The Evmos team has curated a list of grant suggestions aligning with current ecosystem needs. Grant suggestions are organized by category and are subject to change based on current ecosystem needs. Please remember the following ideas are simply suggestions and applicants are encouraged to apply for custom grants not listed below!

Infrastructure

- ERC721 Module
  - Build an ERC721 Module to convert EVM NFTs to Cosmos NFTs and vice versa
  - The ERC721 module should contain similar functionality to the [ERC20 module](#) which converts ERC20 tokens to its Cosmos representation and vice versa

Tools

- Evmos block explorer (Cosmos and EVM compatible)
  - Build a single block explorer that incorporates Cosmos and EVM transactions. Current solutions include two explorers, one for Cosmos transactions and assets and the other for EVM transactions and assets.
- Data analytics
  - Build analytics tools for the Evmos ecosystem. Examples include: airdrop aggregator which captures user data from an inputted block height to help projects airdrop to Evmos users

Decentralized Finance

- Proprietary DeFi Dapps leveraging Cosmos and EVM interoperability
  - Build a dApp that brings additional functionality with Evmos' interoperability with both the Cosmos and EVM ecosystems
