

Lab Notes for Earth Science Collages

What is Earth Science?

With your group, create a collage that shows your common understanding of what Earth Science is.

Guidelines

- One collage per group.
- Each person contributes at least 5 images (cut from magazines).
- All images must have a connecting theme related to Earth Science.
- All images must be organized in such a way to tell a deeper story, not just randomly placed on your collage.
- Each collage needs a descriptive title and a well-written **caption** on the front of the collage.
- Thorough clean-up and recycling occurs before we leave class.

Caption

- A well-written caption summarizes and explains your work in a minimum of **two sentences**, and it helps the reader understand your work.
- **Sentence #1:** Summarizes the assignment completely by answering who/what/when/where.
 - “Our collage shows...” (who/what/when/where)
- **Sentence #2:** Highlights the importance of your work (such as patterns, trends, or concepts) by explaining how/why in more detail.
 - “As you can see from our collage...”
