Abstract (10 font size with Book Antique)

The abstract should be written in one paragraph and should contain 200-250. Generate brief research background; research aims; research methodology (research design, research participants/objects, instruments, data collection technique, data analysis); research findings; conclusion, and implication.

Keywords: Discourse analysis; Religious dimensions; Wedding Ceremony; Macrostructure analysis

INTRODUCTION

In this part, the author provide background information and set the research context. The author also should introduce the specific topic of your research and explain why it is important. Mention past attempts to solve the research problem or to answer the research question. Conclude the introduction by mentioning the objectives of your research. In the first paragraph, the author must describe the domain, field, or phenomena related to the topic/variable under study.

RESEARCH METHOD

Research Design

In the Research Design part, the author should describe your study's overall research design or approach (e.g., experimental, survey, qualitative, quantitative, mixed methods, case study, etc.). Justify the chosen research design by explaining its suitability for addressing the research questions or objectives. Discuss any limitations or potential biases associated with the chosen design and how you addressed or mitigated them.

Participants or Objects

In the context of research participants, specify the characteristics of the participants or sample population involved in your study. Include relevant details such as sample size, selection criteria, and any demographic information. Explain how the sample represents the target population, or justify any limitations in generalizability. The description of the participants is clear. However, including demographic data (e.g., age, gender distribution) could provide more context. Explain why alumni were included alongside current students.

Instruments and Data Collection Technique

In the context of data collection methods, the author is asked to describe the techniques and instruments used to collect data. This may include surveys, interviews, observations, experiments, archival research, or any other data collection methods employed. Provide details on how the instruments were developed or adapted, and any steps taken to ensure their validity and reliability. Variables and Measures: Identify the variables examined in your study and describe how they were measured or operationalized. Provide information about the reliability and validity of the measures used, including any established scales or instruments employed.

Data Analysis

In the data analysis section, the author is asked to explain the statistical or qualitative methods used to analyze the collected data. For quantitative research, mention the specific statistical tests or procedures employed. In qualitative research, describe the techniques used for data coding, thematic analysis, or other forms of data interpretation. Ethical Considerations: Address any ethical issues associated with your research, particularly when human participants are involved. Discuss how you obtained informed consent, maintained participant confidentiality, and adhered to ethical guidelines or institutional review board (IRB) requirements.

RESULTS AND DISCUSSION**Results**

The author must present the research findings in line with the data based on the research problems. The results section should include the findings of your study and ONLY the findings of your study. The findings include: data presented in tables, charts, graphs, and other figures (may be placed into the text or on separate pages at the end of the manuscript)

Discussion

In the discussion, interpret your findings by comparing them with those from previous studies. This involves situating your results within the context of the existing body of knowledge, noting where they confirm, contradict, or extend previous research. Discuss the theoretical and practical implications of your findings, explaining how they contribute to the understanding of the topic. If your results differ from expectations or existing theories, explore possible reasons for these discrepancies.

ACKNOWLEDGEMENT

This section can be written in case there are certain parties need to be acknowledged, such as research sponsors. The acknowledgment must be written in brief and clear. In addition, avoid hyperbole acknowledgment.

REFERENCES

The authors arrange the references in APA style and add references in more than **30 references of articles** from reputable journals. References are strongly suggested in the last 5 years. In addition, the references cited are relevant and current, supporting the research well. Ensure a balanced mix of seminal works and recent studies to provide a comprehensive view of the literature. Verify that all citations are appropriately formatted according to the journal's guidelines.
