

Hey G's, It's Philipp!

If for some reason you're struggling to come up with good sub-niches to pull unlimited prospects from...

Or you just want to save a bit of time and energy by outsourcing as much work as possible...

Then you might want to read this mini-guide and learn how to fully leverage the most groundbreaking technologies of the 21st century in order to generate unlimited sub-niches in a matter of minutes-->

(Step-for-Step instructions on how to use the prompt can be found on the second page)

The prompt:

I need specific sub-niches to pick businesses to partner with, so I can help them with their marketing efforts and make more money for them and myself.

There are 3 big umbrella niches: Health, Wealth, and Relationships.

I now want you to give me 20 sub-niches for each umbrella niche. They don't have to be super-specific yet, just more specific than the umbrella niches.

The niche's market must be growing and growing in demand.

The customers of that niche have to have money (So no poor people or students or low-level workers).

The Niche also has to solve a strong desire or pain of people. (Not a low-level desire/pain like entertainment, but a strong desire/pain like wanting to fix their life, making money, having better relationships with their family, or getting in shape).

The niche mustn't sell commodities.

After you gave me the 60 niches, I'm going to repeat to you 3 niches.

For these niches, you will provide me with 20 sub-niches each that solve a more specific version of the desire/pain (For example Weightloss: Weightloss for men).

The criteria stay the same.

I will repeat three niches as long as I desire and you will give me more and more specific sub-niches within the three umbrella niches that fit my criteria.

How to use the prompt:

Here's a step-by-step guide on how to use this prompt to generate unlimited sub-niches using ChatGPT:

Step 1: Generate 20 Sub-Niches for each umbrella niche by pasting the prompt into ChatGPT and hitting Enter.

Step 2: Choose three sub-niches (preferably from the list provided in Step 1). These three niches will be further explored to generate more specific sub-niches.

Step 3: Feed ChatGPT the chosen sub-niches. ChatGPT will generate 20 more sub-niches for each of the three sub-niches you provided. For example, if the selected niche is "Weightloss," the AI could give you more specific sub-niches like "Weightloss for men" or "Weightloss for busy professionals."

Step 4: Evaluate the Sub-Niches Review the sub-niches generated in Step 4 and assess whether they meet your criteria. Ensure that the sub-niches have a growing market, target customers with purchasing power, address strong desires or pains, and avoid selling commodities.

Step 5: Repeat the Process If you desire more specific sub-niches, repeat Steps 2 to 3 with new sets of three niches selected from the previously generated sub-niches. Keep iterating until you have the desired level of specificity or until you've exhausted the available information.
