

.slide 1

And, before we wrap up this course, I have to give you one last assignment.

.slide 2

Throughout the semester, you have implemented the individual steps of the MCTS algorithm. Now comes the time when you have to put it all together and create a working MCTS agent. The initial assignment presentation is available on the website, so make sure you go through that thoroughly. If you find yourself stuck, feel free to message me and I'll try to help. Also, I can't stress this enough – for many of you, this assignment will be difficult, don't leave it till the last minute. And that's it for me, thank you for coming here and I guess we'll see each other during the exams. Good luck!
