Abstract

The abstract is written in a single paragraph without subheadings, consisting of 150 to 200 words. It must be written in English using an academic, objective, and clear style to comprehensively reflect the substance of the research. The abstract should be formatted in **Times New Roman, size 10 pt, with single spacing (1.0)**. References or citations are not allowed. The abstract should end with a list of **three to five keywords** that are relevant to the content of the research and easily indexed.

The content structure of the abstract includes several main components, namely background, objective, method, findings and implications, and conclusion.

Background: provides a brief overview of the issue or problem underlying the research and its relevance to the field of study.

Objective: is briefly stated to indicate the direction and focus of the research conducted.

Method: describes the approach, design, and techniques of data collection and analysis used in the study.

Findings and Implications: present the main results of the research along with their impact or contribution to the development of knowledge, practice, or policy.

Conclusion: contains the final statement that answers the research objective and, if necessary, provides recommendations or directions for future research.

INTRODUCTION

The introduction must contain (in order) general background, a review of previous literature (*state of the art*) as the basis for a statement of scientific novelty from a journal article or scopus, a statement of scientific novelty and research problems or hypotheses. At the end of the introduction, the purpose of the article study must be written. In the format of a scientific article, there is no literature review as in the research report, but it is manifested in the form of a previous literature review (*state of the art*) to show the scientific novelty of the article.

METHOD

This section contains about the design or design of the research being conducted. In this section, at least it contains the type of research, the research subject/object, the data collection technique/instrument, and the data analysis. If the script requires a table or figure.

RESULTS AND DISCUSSION

The results and discussion contain the results of the research and its discussion scientifically. Write down the scientific findings obtained from the results of the research that has been carried out but must be supported by adequate data. The scientific findings referred to here are not the data of the research results obtained. The scientific findings must be explained scientifically including: What are the scientific findings obtained? Why does it happen? Why is there such a trend of variables? All of these questions must be explained scientifically, not only descriptively, if necessary supported by adequate basic scientific phenomena. In addition, they must also be explained in comparison with the results of other researchers who are almost on the same topic. The results of the research and findings must be able to answer the research hypothesis in the introduction.

CONCLUSION

Conclusion describes the answer to the hypothesis and/or the purpose of the research or scientific findings obtained. The conclusion does not contain a repetition of the results and discussion, but rather a summary of the results of the findings as expected in the objective or hypothesis and is the author's justification. If necessary, at the end of the conclusion, it can also be written what will be done related to the next idea of the research.

FUNDING

The author states that no financial support has been received for the implementation of this research and/or the publication of this article.

CONFLICT OF INTEREST

The author states that this research was conducted without any commercial or financial relationship that can be interpreted as a potential conflict of interest.

AUTHOR CONTRIBUTION

If relevant, statements regarding the contributions of each author may be included in this section.

GENERATIVE ARTIFICIAL INTELLIGENCE USAGE STATEMENT

The authors state that generative artificial intelligence (AI) was used in the preparation of this manuscript. The authors acknowledge the use of generative AI to help improve language clarity and improve the grammatical structure of manuscripts. The use is carried out in compliance with applicable ethical guidelines regarding the use and disclosure of generative AI in scientific research. Each author has made substantial intellectual contributions to this work. The entire content of the manuscript has been carefully reviewed to ensure its accuracy, and the author is solely responsible for the integrity and final content of the manuscript

REFERENCES

All references referenced in the text of the article must be registered in the bibliography section. The bibliography must contain reference libraries derived from primary sources (scientific journals and amount to at least 80% of the total bibliography published in the last 10 (ten) years. Each article contains at least 15 (fifteen) reference bibliographies. Writing a reference system in the text of the article and writing a bibliography should be able for the author to use the reference management application program: Mendeley. Writing references uses the system model of the APA (American Psychological Association) 7th edition.
