

Letter to EUFORES meeting 23 & 24 November 2012.

Respectable Ladies and Gentlemen, of the 12th EUFORES
Inter-Parliamentary Meeting.

My name is Fotios M. Chalkalis. Believing in the unlimited energy of Gravitation, I deal all my life and I already have indisputable results that have been analyzed and confirmed by internationally renowned scientists. Dear representatives, of the 503 million people, please discuss the theme of Gravity and give as an official answer on why gravitation as an energy source is not included in the various programs of research & development like solar, wind, geothermal etc. and you can trace all energy forms back to its root form gravity. ([Link](#))

Clarifying it, do consider the results of the hydroelectric power plants with the great efficiency rate of 90%, which is a derivative of Gravitation. I hope this forum to give an answer on why Gravity continues to be ignored, the endless energy to which we owe our existence as written by great scientists such as Stephen Hawking (his book: "The Grand Design"), F.M. Kanarev and others.

Sincerely
F.M.Chalkalis
