

“Treasure Trap!” Proposal

This project was jointly created by both Ben Collins and Derek Page

Ben’s half of the project:

This creature is constructed largely with the frame of a traditional treasure box, filled with jewels, jewelry, and gold coins. There are sharp teeth and eyes poking out from holes in the wooden frame. These will hopefully provide lots of great opportunities for creative lighting and texture work. There will also be a bit of shrapnel scattered throughout the treasure box and perhaps a little bit of a blood splatter to add to the spooky effect of a monster who keeps eating undersea vehicles.
