third keyword.

Abstract

Abstract in Indonesian is written using TNR 11 font, not italic, single spacing. Abstract contains between 100-200 words that describe the entire contents of the article briefly and clearly (research objectives, methodology, and results).

Keywords: keyword 1, keyword 2, keyword 3 (maximum 3 keywords). The abstract should stand alone, meaning there are no citations or references in the abstract. It should tell the prospective readers what you did and highlight the key findings. Avoid using technical jargon and uncommon abbreviations. The abstract must appear on the top of the first page after the title, author(s) name and affiliation, and author(s) e-mail address. Mention a *corresponding author (who will handle correspondence at all stages of refereeing and publication, as post-publication; this responsibility includes answering any future queries about Methodology and Materials)* of the paper. Keywords are the labels of your manuscript and are critical to correct indexing and searching. They should be well-selected and closely related to the topic to facilitate the reader's search and represent your article's content and highlights. Use only abbreviations that are firmly established in the field. There must be 3-5 keywords (*phrases*). A semicolon should separate each phrase in Keywords.

Introduction

The content of the manuscript contains the Introduction, Implementation Method, Results and Target Achievement, Conclusion, Acknowledgements, and Bibliography. Ensure that the content of the manuscript, except for the acknowledgments, does not contain personal identities or affiliations of the authors.

The introduction is typed using TNR 12 font and 1.5 spacing. In general, the introduction contains the background, problem formulation, activity objectives, and literature review. The author is required to quantitatively present the portrait, profile, and conditions of the target audience involved in the community service activities. The conditions and potential of the region in terms of physical, social, economic, and environmental aspects that are relevant to the activities carried out can also be described. Also describe the potential that is used as material for community service activities. The author is asked to formulate the problem concretely and clearly in this section. Explain the objectives to be achieved in the community service activities.

This section is supported by a literature review that is used to support the concept of community service. The author is required to present a primary literature review (references

to journal articles and conference proceedings) and the latest (references published in the last 10 years). Literature review is not limited to theory alone, but also empirical evidence. Enrich this introductory section with efforts that have been made by other parties. This article is the result of devotion which is a downstreaming of research results, which can be the results of one's own research or other researchers.

Method

In the implementation method section, describe clearly and concisely the methods used to achieve the objectives that have been set in the community service activities, namely: Participatory Action Research (PAR), Community Based Research (CBR), Service Learning (SL), and ABCD (Assessed Based Community Development). The results of the community service must be measurable and the author is asked to explain the measuring instruments used, both descriptively and qualitatively. Explain how to measure the level of achievement of the success of the community service activities. The level of achievement can be seen from the perspective of changes in attitudes, socio-culture, and the economy of the target community.

Manuscripts should be typed using format using 12-pt Times New Roman font; left, right, top, and bottom margins are 2,5 cm; single-spaced on A4-sized paper; 13-20 pages in length or 5000-7000 words. It is expected that the author will submit carefully written and proofread material. The citations and references should follow the style of *the American Psychological Association (APA)* style and use *Reference Management Software Zotero* (<http://www.zotero.org>) or *Mendeley* (<https://www.mendeley.com/>). Careful checking for spelling and grammatical errors should be performed. Grammar Checker Software is suggested.

Result and Discussion

Community service is an effort to disseminate science, technology, and art to the community. These activities must be able to provide added value to the community, both in economic, scientific, and social activities. Describe that community service activities have been able to provide changes for individuals/communities and institutions in both the short and long term. In this section, describe how activities are carried out to achieve goals. Explain the indicators of achieving goals and the benchmarks used to state the success of the community service activities that have been carried out. Express the advantages and disadvantages of the output or main focus of the activity when viewed in accordance with the conditions of the community at the location of the activity. Also explain the level of difficulty in implementing activities or producing goods and opportunities for future development. Articles can be strengthened with relevant documentation related to services or goods as outputs, or the main focus of the activity. Documentation can be in the form of images of the application or implementation process, images of product prototypes, tables, graphs, and so on.

Tables and figures

Tables and figures are part of the manuscript and are not separated from the body of the manuscript. Place tables and figures in a place that is appropriate to the narrative so that they complement the narrative. Tables and figures are numbered sequentially based on the order in which they appear in the manuscript. Tables and figures must be titled. The numbers are followed by the title of the table and figure.

For more details, see the following figures and tables:.

This section deals with the discussion of the research findings. It is the subheading level one. In the Discussion section, the author should present a detailed explanation in several subsections (depending on the needs). The discussion should explore the significance of the results of the work, not repeat them. In the discussion, it is the most important section of your article. Here, you get the chance to sell your data. Make the discussion corresponding to the

results, but do not reiterate the results. Often, it should begin with a summary of the leading scientific findings. The meanings of the findings should be shown from current theories and references of the area addressed.

In the discussion section, you compare and contrast the current research findings with those from the previous research or the supporting theories. There should be a similarity and contrast analysis. The following components should be covered in the discussion: How do your results relate to the original question or objectives outlined in the Introduction section (what)? Do you provide an interpretation scientifically for each of your results or findings presented (why)? Are your results consistent with what other investigators have reported (what else)? Or are there any differences?

Conclusion

The conclusion should clearly indicate the results obtained, their advantages and disadvantages, and possible further developments. The conclusion can be in the form of a paragraph, but should be in the form of points using numbering or bullets.

References

The citations and references are referred to in the sixth edition of the American Psychological Association (APA) style, using manager references (Mendeley/Zotero). The list of references is the latest bibliography with a minimum of 60% references from scientific journals or interrelated research above 2018. The number of references in the bibliography is at least 15 references. You should cite several articles published in the Journal of Seutia Hukamaa Cendekia.
