INTRODUCTION

This template should be used as an article writing format and layout guide. The author must follow ALL the rules of writing, both in terms of typeface, size, layout, number of words, systematics and writing references. The author must also ensure that the article uses good and correct Indonesian.

Each new paragraph must be written indented into one tab (1,15 cm. Articles submitted must be in Microsoft Word format, with paper size A4, top and left margins 4 cm, right and bottom margins 3 cm, and single line spacing. Writing punctuation marks (period, comma, colon, semicolon, parentheses, quotation marks, question marks, exclamation points, slashes, etc.) is not preceded by a space and followed by a space, except for the use of periods or commas in decimal number markers.

The introductory section mainly contains the reasons for conducting the research which is supported by a literature review (theoretical). The introductory section is expected to contain as many quotes from scientific journals (preferably from national and international journals). To make it easier for the author, technically the author can use this template in full. Authors can customize the entire contents of this template (overwritten) section by section. So, overall it is hoped that the articles submitted are in accordance with the expected guidelines. We recommend deleting as needed to avoid mistakes in other parts.

METHOD

The research method used in the problem experiment includes analytical methods. Contains the type of method, time, place and tools of research materials. Picture captions are placed as part of the picture title (figure caption) not part of the picture. The methods used in completing the research are listed in this section.

RESULTS

The results and discussion contain the results of research findings and scientific discussions. Write down scientific findings (scientific finding) obtained from the results of

research that has been carried out but must be supported by adequate data. The scientific findings referred to here are not data obtained from research results. The scientific findings must be explained scientifically including: What are the scientific findings obtained? Why did that happen? Why such a variable trend? All these questions must be explained scientifically, not only descriptively, if necessary supported by adequate scientific basis phenomena. In addition, the comparison with the results of other researchers on the same topic should also be explained. Research results and findings must be able to answer the research hypothesis in the introduction.
