

NC VR Adventures On the Road

Learn how to positively impact student learning by creating innovative, literacy-rich, project-based learning experiences that will engage students in content areas from science and social studies to math and CTE using tools educators likely have in their classrooms right now. This engaging instructional strategy is applicable to all classrooms and can be experienced by students through a simple link on a variety of technology including chromebooks, phones and tablets as well as VR headsets. NC VR Adventures are designed for K-12 educators, school counselors and anyone eager to take learners on adventures.

Join one of our 1-day workshops to learn how.

Workshops will be led by the Innovative Learning Catalysts from the NCDPI Digital Teaching Learning division.

Refreshments and lunch will be provided.
