So with our BusyThings we will sit with our students and give them the confidence and maybe we'll even model it so it's both of us working together. They then eventually will get the confidence and they will work on their own. Busythings are tailor made so you can actually create a resource, especially for the individual child. And they absolutely love busy things because it's for right and it's absolutely great fun. So they don't even know they're learning. So it's a really, really good resource.

For some of our students they need help with access. But BusyThings is absolutely brilliant because you can use switches and joysticks and with our help, with our support, they all seem to be able to get through and independently at the end be able to use BusyThings.

Also, they can use BusyThings at home. They don't have to just use it at school so you can set homework. They introduce Widgit because we can just log on to LGfL, type in any word we want and we'll get our symbol up.

This is great for our school and also it's a resource there on LGfL and it's for everyone to use. I use this on many occasions.

One of the things we really, really appreciate about the LGfL website is signposts. We was creating a story and we wanted sound effects on LGfL.

Signposted BBC sounds wonderful. So we downloaded all the sounds that we needed and created a wonderful experience story with lots of sounds.
