Abstract Process: Submitted: 00/00/0000 Accepted: 00/00/0000 JEL Codes: JEL 1, JEL 2, JEL 3 (minimum 3 maximum 5 JELS)	Key Considerations in Writing an Extended Abstract An extended abstract is a detailed summary of a study that presents its key elements but is not as lengthy as a full paper. It should be structured to reflect the main sections of the paper. - Introduction: Specifies the context, significance, and research question of the study. - Methodology: Describes the methods and data collection processes used. - Findings/Results: Summarizes the main findings of the study. - Conclusion and Contributions: Highlights the study's conclusions, contributions, and areas of application. Introduction - The theoretical and empirical gaps addressed by the research should be clearly stated. - The topic, purpose, significance, and scope of the study should be emphasized. - The research question or hypothesis should be explicitly stated. - A brief explanation of how the study contributes to the literature should be provided. - A concise summary of relevant literature should be included to explain the study's contribution to the field. - The limitations and scope of the study should also be briefly mentioned in this section. Example: This study focuses on [topic] and addresses the [gap or problem] observed in previous research. The aim of the study is to fill this gap by addressing [research question or hypothesis]. Existing studies in the literature are limited to [brief summary of the literature], and this study aims to provide [original contribution]. Main Body The main body should include the following subsections: a. Methodology - The methods used in the research should be clearly and explicitly defined. - The data collection process, analysis techniques, and tools used should be detailed. - The dataset, sample size, and data collection instruments should be specified. - The methodology section should be descriptive enough to allow readers to replicate the study. Example: The research was conducted using the [method] approach. During the data collection process, [data collection tools] were used, and the study was carried out with a sample size of [sample size]. The data were analyzed using [analysis method]. b. Findings and Discussion - The key/most significant findings of the research should be presented clearly and concisely. - The findings should be compared with the existing literature, and the study's contribution to the field should be emphasized. - The practical and theoretical implications of the findings should be explained. Example: The results of the study indicate that [key findings]. These findings provide an answer to [research question]. Specifically, [detailed finding] shows [similarity or difference] when compared to the existing literature. c. Future Research Directions - The limitations of the study and how these limitations can be addressed should be discussed. - Suggestions for future research should be provided. Originality - The extended abstract should clearly demonstrate the originality of the study and its contribution to the literature. - It should explicitly state why the study is important and which gap it addresses. Conclusion/Contributions - The main conclusions of the research should be summarized. - The theoretical and practical contributions of the study should be clearly stated. - The overall benefits of the study to the literature and practice should be emphasized. Example: This study makes a significant contribution to the literature by providing [theoretical/practical contributions]. Additionally, it offers recommendations for [application areas]. Suggestions for future research include [recommendations]. Formatting - Word Count: The extended abstract should typically be between 1500-2000 words. - Font and Size: Use Arial, 9-point font for the entire text. - Line Spacing: Single line spacing should be used, with no extra spaces between paragraphs. Language and Style - The extended abstract should be written in an academic tone and adhere to grammar rules. - Unnecessary technical details should be avoided, but sufficient information should be provided to demonstrate the originality of the study. - Clear and concise language should be used to ensure the study is understandable to an international audience. Keywords: Word 1, Word 2, Word 3, Word 4, Word 5 (minimum 4 maximum 5 Words)
