

Flaxen

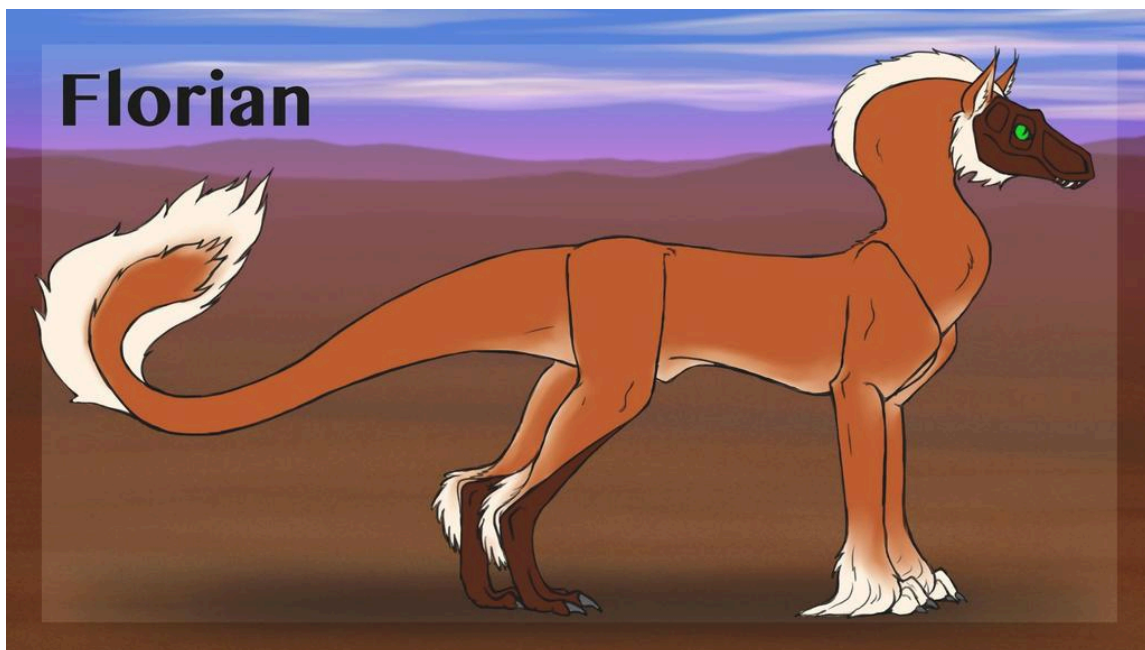

ff

- Flaxen is a homozygous recessive gene, meaning it'll only show when it's homozygous recessive.
- Flaxen ONLY affects chocolate and red pigment.
- It only shows in the crest, tail hair, and chest mane in silkies. It can also add flaxen frosting on the paws without pangare being present.
- It will dilute to an orange/red shades on chocolate pigment and tan to cream on red pigment.

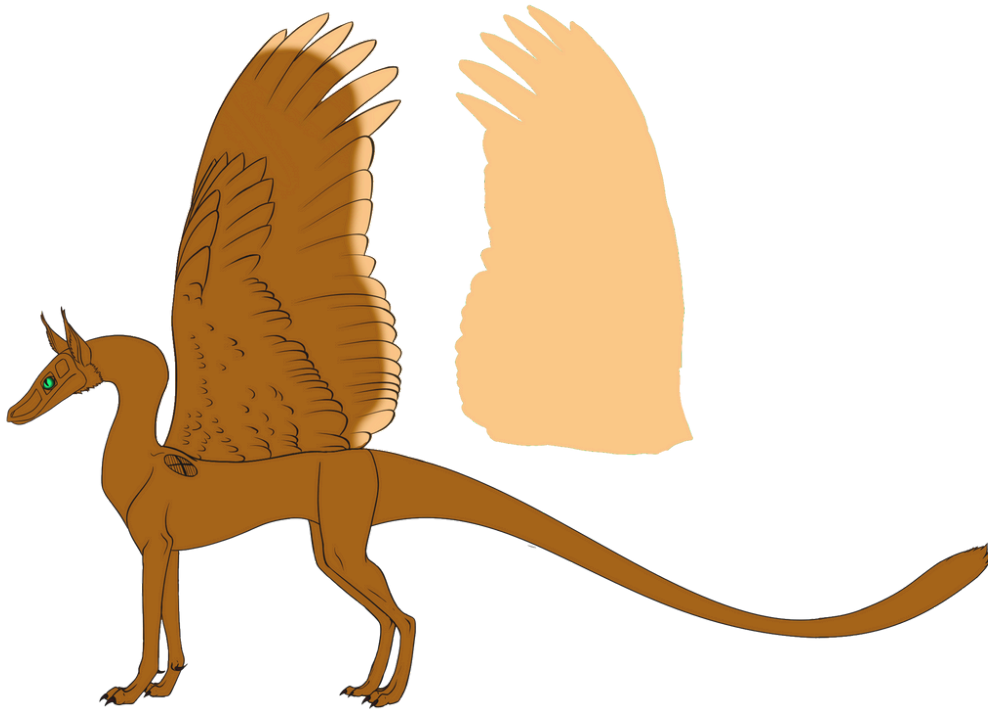

Frosting on Paws:

- This is about the max amount on the paws. You can also add some in the ears and around the cheek fluff.

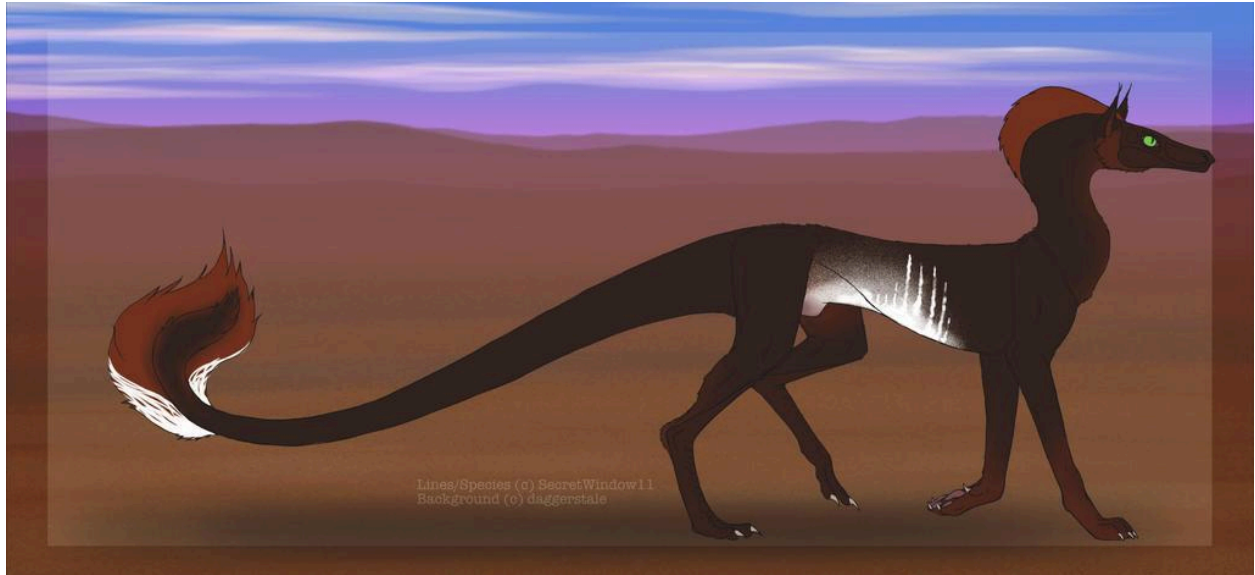

With Wings:

The whole bottom side of the wing can be covered in flaxen.

**EXAMPLES:**

Flaxen Orange Pangare with Freckling

Flaxen Chocolate Rabicano

Splashed White Flaxen Red Red Panda

Flaxen Red Dun Zebracine

Flaxen Orange Pangare Tiger
