

Generative AI Video tasks

1. Create videos

Create an AI video using any of the tools we discussed in class. Label the video with the tool, the prompt you used, and rate the results on a scale of 1 (terrible) to 5 (amazing).

2. Compare video tools

Use the same prompt as above to create your video in a different AI video tool. Which tool do you believe performed better and why?

3. Make an image talk

Take a photo of yourself and make it talk using D-ID or HeyGen. Show the original image and the resulting video.

4. Edit with Descript

Record a 30-second video of you looking at the camera and talking about any topic. Then upload the video to Descript and remove any filler words or other areas of the video. Upload the before and after video along with a sentence or two on how well it worked as an editing tool.

5. Test another AI video tool

Create something using another tool we talked about in class or that you find on your own. Write about the tool, what it does, how easy it was to work with and what you thought of the results.
