Akvelon Inc.

Position: Senior Frontend Software Development Engineer

About us

Akvelon Inc. (USA) works in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in the United States and other countries (**Microsoft, Facebook, Airbnb, Dropbox, Pinterest,** and many others). This is a great opportunity to learn from and work with leading engineers of world-renowned companies.

About project

American social news aggregation, content rating, and discussion website. Also called "The front page of the internet," it brings over 430 up million people together each month through their common interests, inviting them to share, vote, comment, and create across thousands of communities. Come for the cats, stay for the empathy.

The International division helps us achieve our mission of bringing community and belonging to everyone in the world through work on multiple teams. We connect users to each other through engaging, real-time chat experiences. We help users encounter the best content at the right time via the right product surface. And we are laying architectural foundations and building experiences to help communities thrive internationally. These efforts set us up for continued growth, and as a backend engineer you contribute to the delight of millions of new and existing users.

As a Frontend Engineer, you'll build and scale the exciting features and services needed to create real-time experiences and spark connections, which will fuel the next wave of the website's Growth. With our small team, your work will directly impact hundreds of millions of users around the world. Join us and help build the future of popular social network!

Responsibilities

- Build new features and products into the client's web app using modern frontend tools (Typescript, React, Redux, GraphQL, LitElements)

- Collaborate directly with designers and product managers to build delightful user experiences
- Own engineering projects from design to implementation to deployment and maintenance
- Solve complex frontend challenges around performance and code reusability while continuously improving code quality

Work Schedule

- Overlapping with the Pacific Coast till at least until 12 PM PST

Requirements

- 5+ years professional experience building web applications with JS, React/Redux, Lit, TypeScript and CSS.
- Excellent communication skills. You must be able to collaborate effectively with teams in a fully remote environment and discuss complex topics with technical and non-technical audiences.
- Able to work effectively under schedule pressure to fix bugs, review code, design, write, test new code, and diagnose production issues.
- Experience with GraphQL

Nice to have

- Experience working with Web Components / Custom Elements is a plus
- Holistic understanding of software systems
- Able to collaborate with backend and native mobile engineers to write design docs and design effective APIs
- Experience building accessible features
- Experience building complex animations and transitions to make delightful UIs
- Full-stack background is a plus

Our benefits

- Paid vacation, sick leave
- Official state holidays
- Professional growth while attending challenging projects and the possibility to switch your role, master new technologies and skills with company support
- Flexible working schedule: 8 hours per day, 40 hours per week
- Personal Career Development Plan (CDP)

- Employee support program (Discount, Care, Heals, Legal compensation)
- Paid external training, conferences, and professional certification that meets the company's business goals
- Internal workshops & seminars
- Relocation support
