

Akvelon Inc.

Position: Senior Software Development Engineer

About us

Akvelon Inc. (USA) works in the field of software engineering based on a variety of technologies. Our company is a member of the vendor program, which gives employees the opportunity to work with clients in the United States and other countries (**Microsoft, Facebook, Airbnb, Dropbox, Pinterest**, and many others). This is a great opportunity to learn from and work with leading engineers of world-renowned companies.

About project

American social news aggregation, content rating, and discussion website. Also called "The front page of the internet," it brings over 430 up million people together each month through their common interests, inviting them to share, vote, comment, and create across thousands of communities. Come for the cats, stay for the empathy.

We're evolving and continuing our mission to bring community, belonging, and empowerment to everyone in the world. Providing a delightful and relevant experience to our users applies to our Ads like all of our offerings, and we're excited to build a product that is best-in-class for our users and advertisers. The year ahead is a busy one - join us!

As a member of this mission driven team, you will have lots of ownership and impact to shape our ads business to support the overall Client's mission. Technologies you might work with include:

- Languages: Go, Scala, Python
- Frameworks: Baseplate, Spark, Flink, Thrift
- Datastores: DynamoDB, Redis, Druid, Kafka, BigQuery
- Tools: Kubernetes, Airflow

Responsibilities

- Work with product managers to research, design, implement, test and deploy ads products;

- Collaborate closely with the platform and data teams while building new features or new models;
- Lead the processes needed to improve operational stability, including improving code quality, delivering dashboards and data visualizations;
- Build extendable components that would align with the product objectives;
- Support day to day project management tasks including communicating project updates, managing project timelines and overseeing project execution.

Work Schedule

- Overlap with Dublin time at least 5 hours, till 1 pm by GMT+1

Requirements

- 5+ years backend development experience with multiple parts of the backend stack, from databases to networking to efficient computing.
- Experience with Go or strong Python and intention to learn Go and switch to it
- Experience with Postgres, Redis, Thrift, Protobuf, GraphQL and Docker/k8s on AWS.
- Ability to design and implement complex distributed systems operating under high load.
- Experience developing customer-facing public applications is preferred.
- Excellent communication skills. Ability to collaborate effectively with teams in a fully-remote environment, and discuss complex topics with technical and non technical audiences.

Nice to have

- Full-stack background
- 3-5 years of software development experience in one or more front end focussed programming languages; Javascript, Typescript, ES6d;
- Experience with one or more front-end web frameworks such as LIT, Polymer, React, Vue, or Angular with experience with CSS;
- Experienced REST, HTTP, Thrift basics, and the ability to design and implement maintainable APIs is a plus;

Our benefits

- Paid vacation, sick leave
- Official state holidays
- Professional growth while attending challenging projects and the possibility to switch your role, master new technologies and skills with company support

- Flexible working schedule: 8 hours per day, 40 hours per week
- Personal Career Development Plan (CDP)
- Employee support program (Discount, Care, Heals, Legal compensation)
- Paid external training, conferences, and professional certification that meets the company's business goals
- Internal workshops & seminars
- Relocation support
