

State debt

During covid, inflation peaked but our debts maintained a steady state.

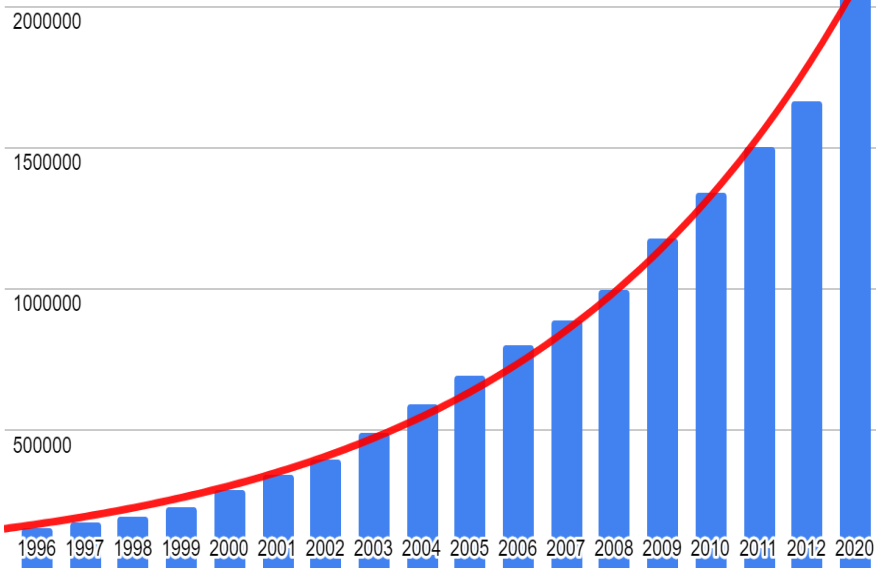

The graph above shows exponential growth in the state debt of Czech Republic over the course of two decades.

State Debt vs. Years

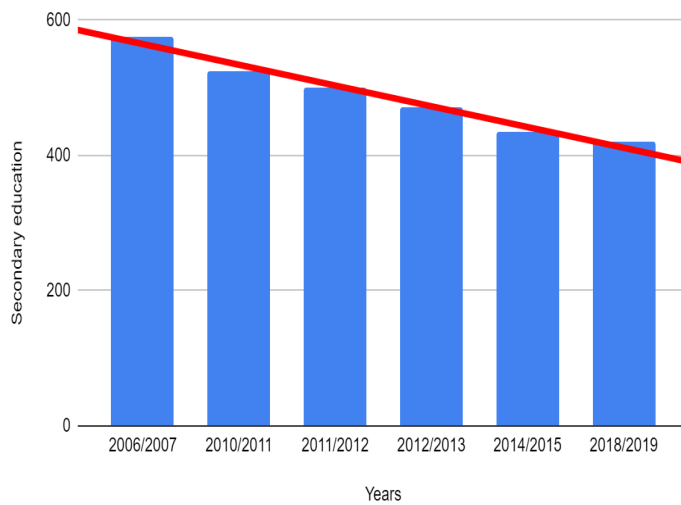

Years / State Debt

State Debt $168724e^{0.147x}$

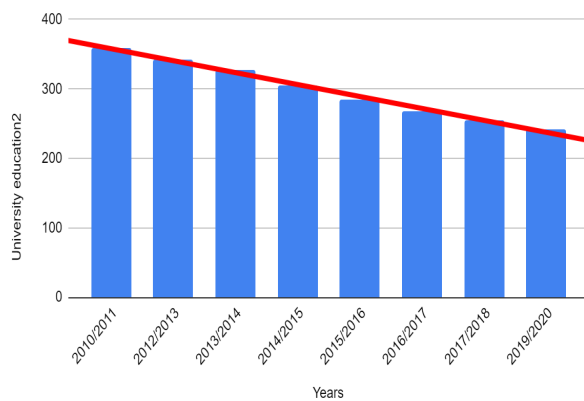

The State debt has been exponentially increasing through the years. This means that the government is misusing money in spending, and this should be stopped.

Secondary Education Tanking Among Citizens

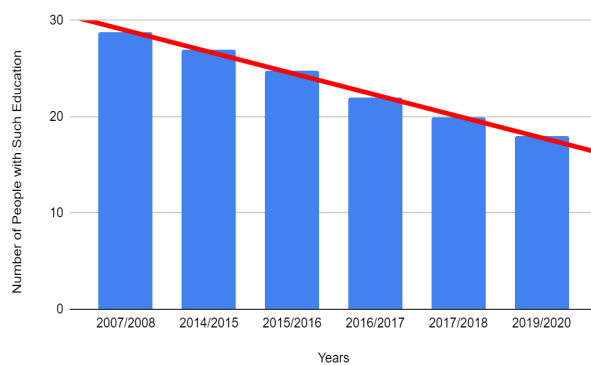

Secondary education amongst citizens is becoming more and more scarce as the years go on. With the same government in place, this decline will only continue.

University Education Tanking Among Citizens

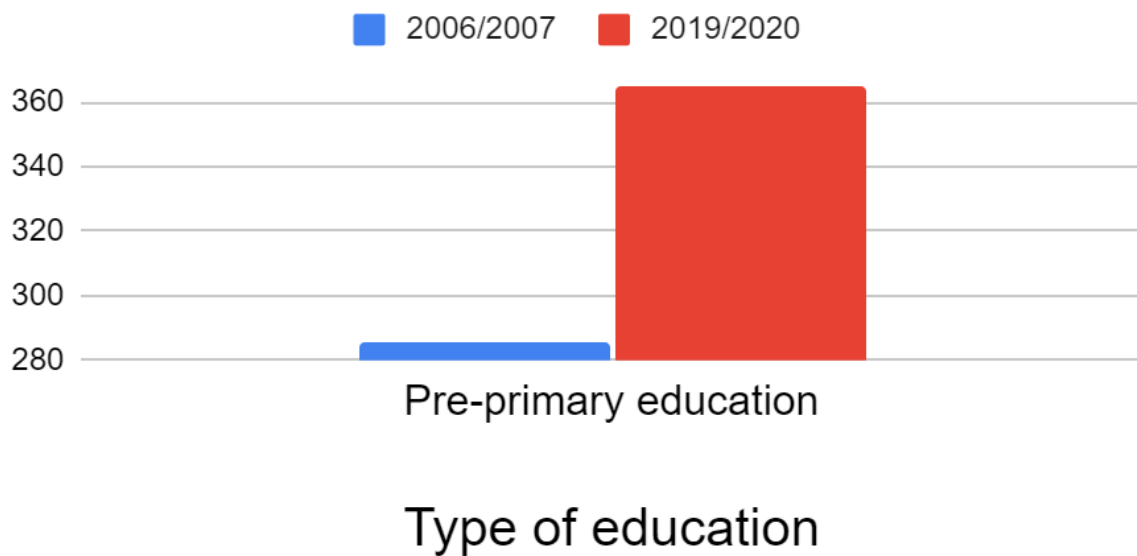

High Professional Education

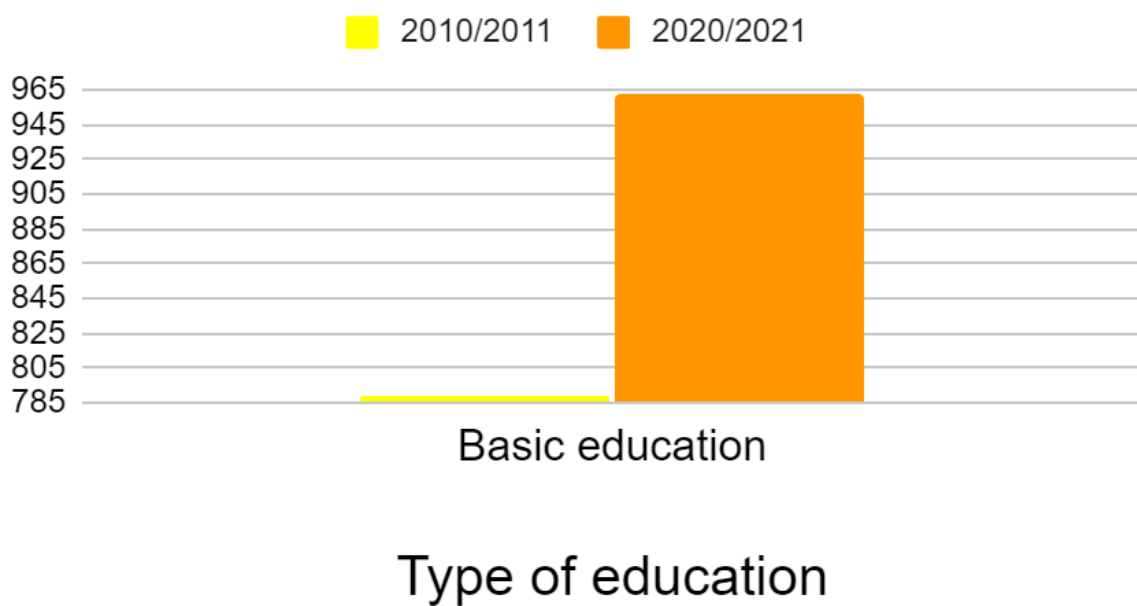

University and professional education is essential for work in a professional setting, and with these two types of high level education CONSISTENTLY PLUMMETING, the state will have no skilled workers in order to enhance society, so this must be stopped, and education must be yet again implemented, encouraged, and enforced with a NEW GOVERNMENT.

Government Graphs

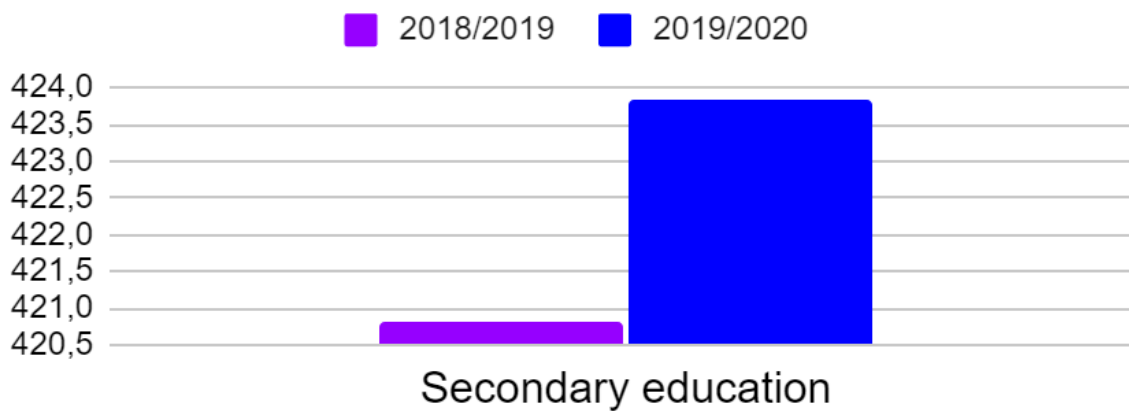

Pre-primary education from 2006/2007 to 2019/2020

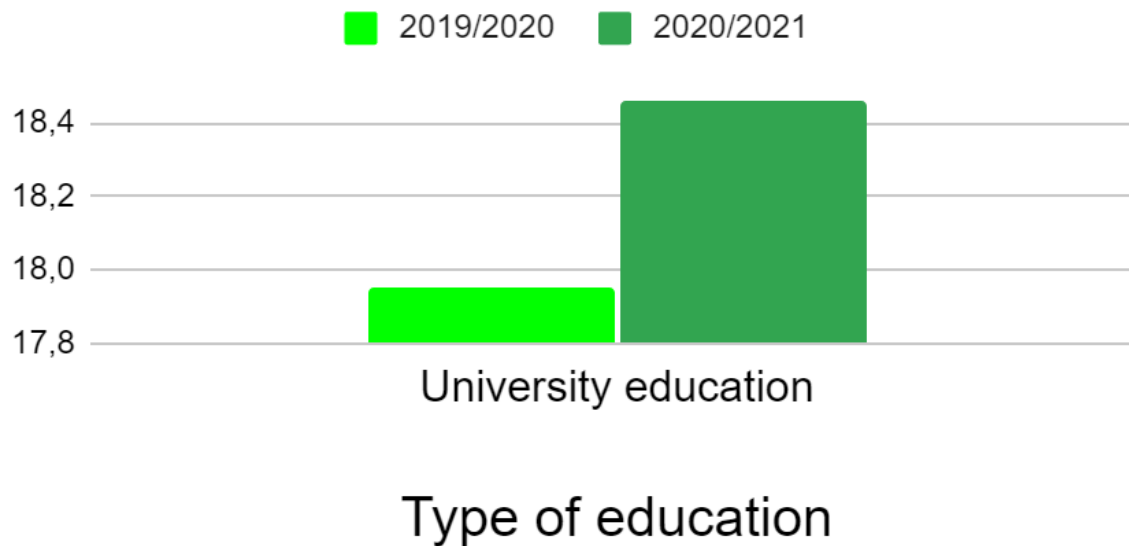

Basic education from 2010/2011 to 2020/2021

Secondary education from 2018/2019 to 2019/2020

University education from 2019/2020 to 2020/2021

Total amount of students from 2015/16 to 2019/20
