Full Title of Manuscript Centre and Bold

ABSTRACT

Use Cambria 11 font and justify. The abstract must sufficiently reflect the article. It is important to briefly mention that the study importance to support the knowledge in the research area. The abstract of the manuscript should not exceed 300 words. Abide strictly by this limitation of length. The abstract should comprehensively but succinctly describe the contents of the paper to the reader, and abbreviations and reference citations should be avoided. The abstract should state briefly the purpose of the research, the principal results, and major conclusions. Abstract should not copy paste from Conclusion section but give a brief concluding remarks on your outcomes.

Keywords: 3-7 keywords alphabetically, must be the words that are not appear in full title

Introduction

The background section should be written from the standpoint of researchers without specialist knowledge in that area and must clearly state - and, if helpful, illustrate - the background to the research and its aims. The section should end with a very brief statement of what is being reported in the article and its aim (Zubir, Ross, Hamzah, & Aqma, 2019). Note: "et al." is used for five or more authors (Bulgari et al., 2015). Do not italic ~~et al.~~

Materials and Methods

The manuscript should present the complete information on the materials and method, so that anyone can duplicate the experiment. When using standard procedure, provide complete reference. In case a modified procedure has been applied, then the modification must be described. Materials and methods should not more than 1500 words with line numbering. The method was appropriate to approach the problem solving. This can be divided into subsections if several methods are described (Chavas & Mitchell, 2018).

Subheading

Subsection should describe completely the plant materials, the cultivation technique, methods used, and design of experiments. Include the name of all chemicals and compounds (Suyanto, 2014). Use the correct design of experiment, with the minimum parameters of observation is five.

Sub-Subheading

We suggest authors use advance parameters until the level of such as: molecular, cellular, physiological, enzyme, correlation, principal component analyses, phylogenetic tree, SEM analyses, photosynthesis rate, two seasons, two locations, etc.

Result and Discussion

The Results and Discussion may be combined into a single section or presented separately. They may also be broken into subsections with short, informative headings.

Figure 1. Figures are numbered with Roman numerals and even at the beginning of a sentence

Table 1. Tables are numbered with Roman numerals and even at the beginning of a sentence

No.	Characters	Length (cm)
1.

..		

Conclusion

This should state clearly the main conclusions of the research and give a clear explanation of their importance and relevance. Summary illustrations may be included.

Acknowledgement

These should be included at the end of the text and not in footnotes. Personal acknowledgements should precede those of institutions or agencies.

References

Editorial team recommends to follow referencing software as reference manager, some are Zotero, Mendely, Endnote, etc. The citation and reference referred to APA 7th style (<https://apastyle.apa.org/>). The references should include only articles that are published or in press. Citations in the reference list should contain all named authors, regardless of how many there are. References begin on their own page and are listed in alphabetical order by the first author's last name. Previously published work must be acknowledged by appropriate citation in the main text and a full reference list. Unpublished results, including submitted thesis, should be cited as unpublished in the references. All references should be in Cambria 11-point font, align left, and single-spaced. Include DOI or http in the references, where applicable. Please check to **PubMed** (<https://www.ncbi.nlm.nih.gov/pubmed/>) and **CrossRef** (<http://www.crossref.org/>) to check your references.

Writing the references perfectly is crucial. The complete reference should give the reader accurate information. Please follow APA Style 7th and do not make any mistake in spelling, capitalization and punctuation. **Writing references perfectly is the responsibility of the authors.**

Please use the following style for references:

NOTE FOR AUTHOR(S)

Abbreviations

Abbreviations should follow SI symbols and those recommended by the IUPAC. Abbreviations should be defined in brackets after their first mention in the text. Standard units of measurements and chemical symbols of elements may be used without definition in the body of the paper.

Preparing illustrations and figures

A maximum of 3 figures is allowed. Figures and images should be labelled sequentially, numbered and cited in the text. Figures should be referred to specifically in the text of the paper but should be embedded within the text. The legends should be included from the main manuscript text file and being a part of the figure file (using Arabic numerals, maximum figure title is 15 words and detailed legend, up to 300 words). The use of three-dimensional histograms is strongly discouraged when the addition of the third dimension gives no extra information. The following file formats can be accepted:

- PDF (also especially suitable for diagrams)
- PNG (preferred format for photos or images)
- Microsoft Word (figures must be a single page)
- Power Point (figures must be a single page)
- TIFF
- JPEG

Preparing tables

A maximum of 3 tables is allowed. These should be numbered in sequence using Arabic numerals (i.e. Table 1, 2, 3 etc.). Tables should also have a title that summarizes the whole table, maximum 15 words. Table should be embedded into the text file but in portrait format (note that tables on a landscape page must be reformatted onto a portrait page or submitted as additional files).

Preparing additional files

Supplementary information is peer-reviewed material directly relevant to the conclusion of an article that cannot be included in the printed version owing to space or format constraints. Any additional files will be linked into the final published article in the form supplied by the author, but will not be displayed within the paper. They will be made available in exactly the same form as originally provided.

If additional material is provided, please list the following information in a separate section of the manuscript text, at the end of the document text file:

- File name
- File format (including name and a URL of an appropriate viewer if format is unusual)
- Title of data
- Description of data
