MATH-M212 – Calculus II

Fall 2020 Syllabus

Class Time: Live Lectures MWF – 12:20 PM – 1:10 PM

Location: Classroom Zoom Room: LOCATION

Recording of lectures will be posted to the course website for asynchronous viewing by 5pm each day

Course Topics Overview:

This course will be a continuation of Calculus I and will cover three major themes:

- *Integration Theory:* anti-derivatives, integration, techniques of integration, improper integrals
- *Applications of integration:* applications of integration to physics and geometry, differential equations, slope fields, first order differential equations, second order differential equations and applications
- *Approximations:* Taylor polynomials, infinite series, Taylor series

Pre-requisites: C or better in MATH-M211

Important Note: Students enrolling in my class are accountable for all of the material in Calculus I; If you have not mastered those concepts you should visit me or a TA and we will provide resources that can help you learn and review the concepts from Calculus I, which should prepare you for this course. If you still have more to learn after that review, you might consider auditing Calculus I again before taking this course, because this course will build on that knowledge and grow your understanding of these topics.

Instructor: [Name of Instructor]

Instructor@school.edu

Office Hours: Mondays and Wednesdays, 10am – 12pm in our classroom zoom room or by appointment

About Your Instructor: I became fascinated by math while going to university. I was intimidated by math at first, and after I got the lowest grade I had ever had on my first midterm, I wondered if I was cut out for this field. However, I accessed tutoring services and put in some extra hours, and I earned a significantly higher grade on the final. In time, I developed a passion for the subject, even doing a PhD. I hope to share that passion with you.

Teaching Assistant: [TA name]. TA1@school.edu

Office Hours: Tuesdays and Thursdays, 12pm – 1:30pm or by appointment

Questions for the TA or me:

The chat room on our course website will be our **primary** form of communication for asking questions pertaining to course content. The TA will be checking the chat several times throughout the week to respond to questions, and will let me know about questions that need me to personally address. Be mindful that chat messages are not private, and will be viewable

to everyone in the course. If you need to discuss something with myself or your TA one-on-one, please reach out by email.

Textbook Information

Required text: Picard, J.L. (2015). *Calculus: Eighth Edition in Modules*. New York: Worth Publishers.

- It is essential that you purchase the eighth edition. Do not use older versions.

Course Elements

Exams: There will be two midterm exams and a comprehensive final. I am interested in your learning and your approach to problems. Therefore, partial credit will be given when you have solved parts of the problem correctly. Showing your work allows us to assess whether you are on the right track.

Quizzes: There is a quiz every week covering the material from the previous week. If you do all of your homework and understand the material, there is no reason for you not to do well on the quizzes. I assign these quizzes for two reasons. One reason is to show me how well students are understanding the material, whether there are some students who are not there yet, and whether I need to review certain concepts with the class. The other reason is to let you assess how well you are understanding the concepts and where you need to focus more of your efforts to learn the course material. If you are struggling on the quizzes, it means that you need to seek help from me, one of the TAs, the Department resources listed below, or your peers, so that we can help you learn the material.

Course Policies:

Attendance: I do not take attendance. You are adults and I expect you to be motivated to grow your knowledge and abilities by engaging in assignments and course lectures. I recommend that all students attend live lectures if possible, because I believe attending lectures is the best way to learn the concepts and improve your math skills. If you must miss a live lecture, it is your responsibility to access the recording when it becomes available on the course website.

Grading policy: I provide multiple opportunities for students to receive feedback on their performance throughout the course to give students opportunities to see how they are doing and so that they can identify places they need to apply more effort or new strategies along the way, seek help if they are struggling and improve throughout the semester. My hope is that all students will develop the knowledge they need to do well in this course and that all students—even those who perform well early in the semester—will improve and develop greater knowledge and skills through practice on the quizzes and exams. Students earn the grades they receive; I do not curve grades or add extra points or extra credit in this course because I do not believe students' grades should be tied to other students' grades (on a curve) and because there are plenty of opportunities for students to improve their grades throughout

the semester with the quizzes and exams.

Note: In previous years, some students have told me that they had times during the course when they felt that they were not doing well and became uncertain about whether they belonged in this class or should change majors. I advised them to hang in there, and in the meantime to access the tutoring centre, put in some extra hours studying, and join a study group. A number of these students contacted me later in the year to tell me that, now that some time had passed and they had taken some positive steps, they did feel like they belonged in the class and in the major. For recommendations for resources available to help you succeed in this course, please see the Academic Supports section of the syllabus below.

Academic Integrity

The Mathematics Department expects students to comply fully with University policies on academic integrity. The usual policy for a student caught cheating in M212 includes a course grade of F. Additional penalties may include probation, suspension, or expulsion from the University. All suspected cases of academic misconduct will be reported to the Office of Student Ethics. You are capable of meeting my expectations for this course. If you are concerned about how well you are doing in this course, please come speak with me instead of considering academic misconduct.

Academic Supports:

This campus provides extensive academic supports for students, and these supports are there to let students achieve the academic success they are truly capable of. I have provided a list of the academic support offices offered by [school name] below.

Math Department Help Desk: The Math Department offers help sessions for students enrolled in M212. I strongly suggest that all students make use of these resources as every student can improve and challenge themselves by attending these help sessions. Please check the Math Department website for information about their virtual drop-in hours, or to schedule an appointment.
