

ANDROID

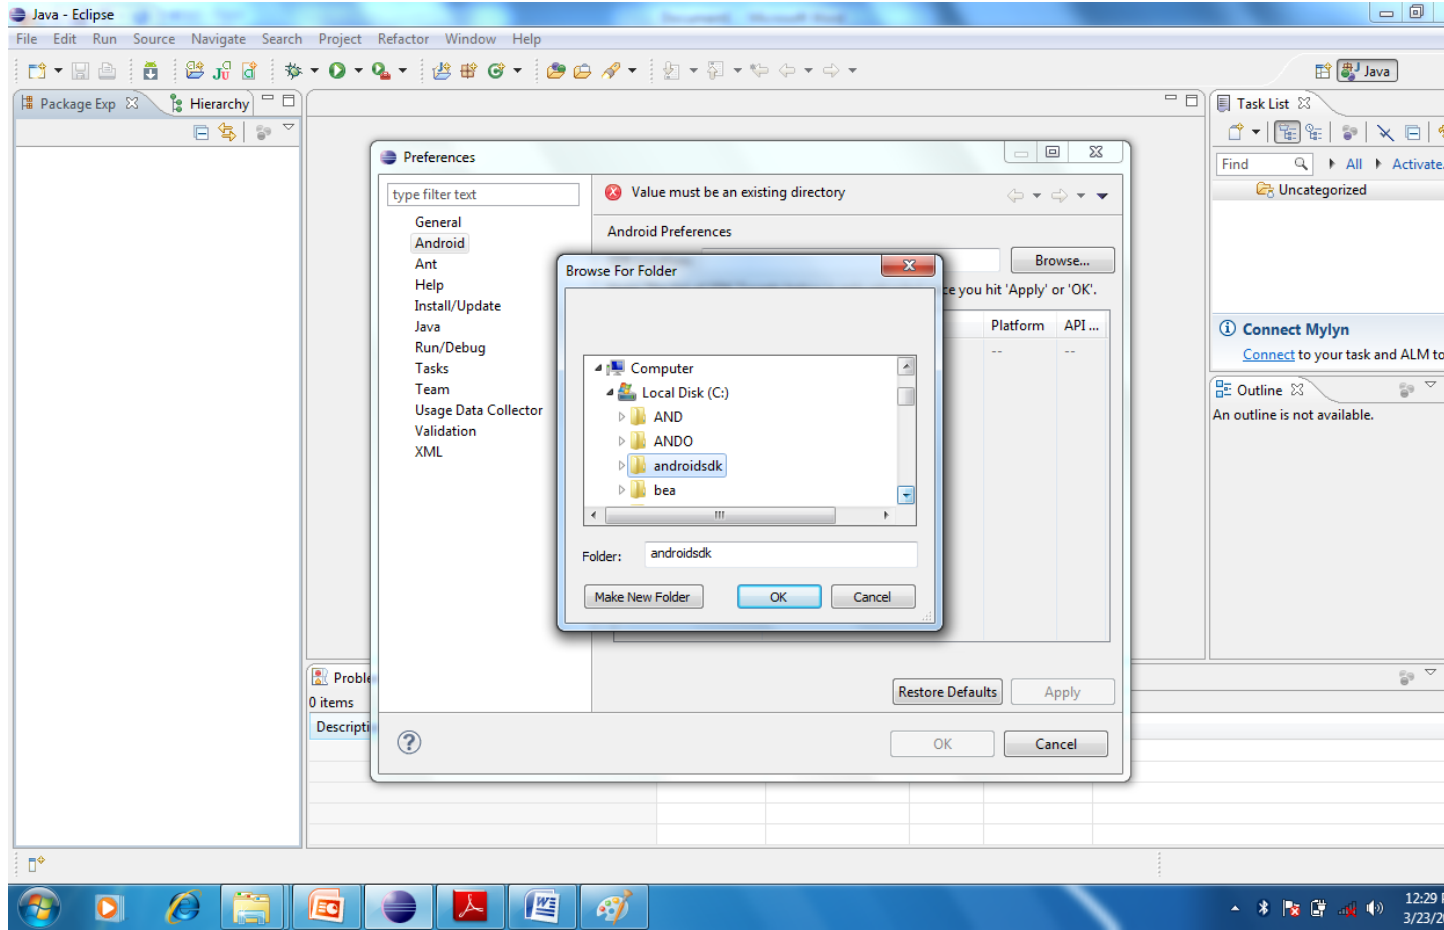

Install the following:

- The Android SDK
- Java Development Kit (JDK) 5 or 6
- Eclipse with the Android Developer Tool (ADT) plug-in
- After Installing all these three configure **Android SDK PATH** for Eclipse

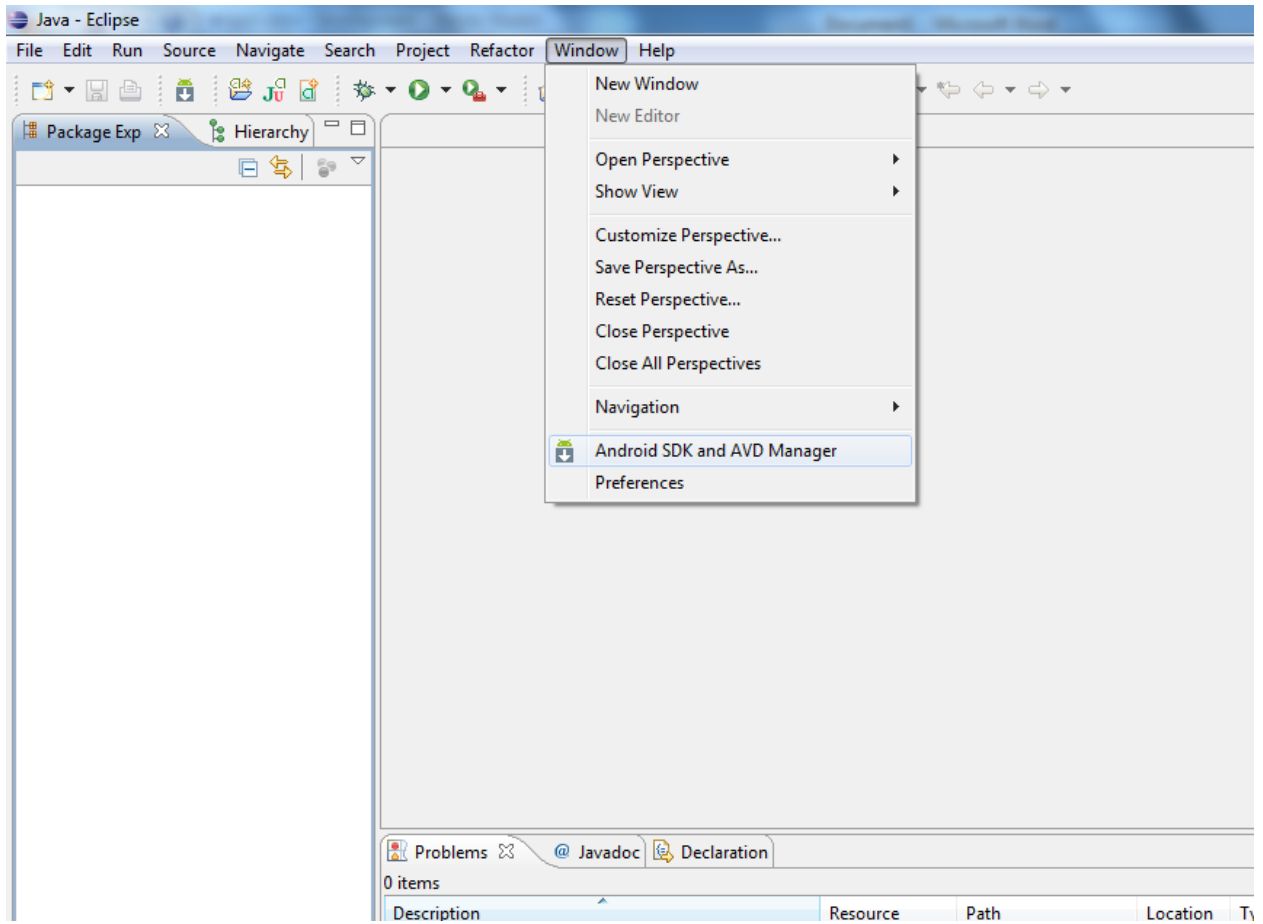

Specify Android SDK Location for Eclipse

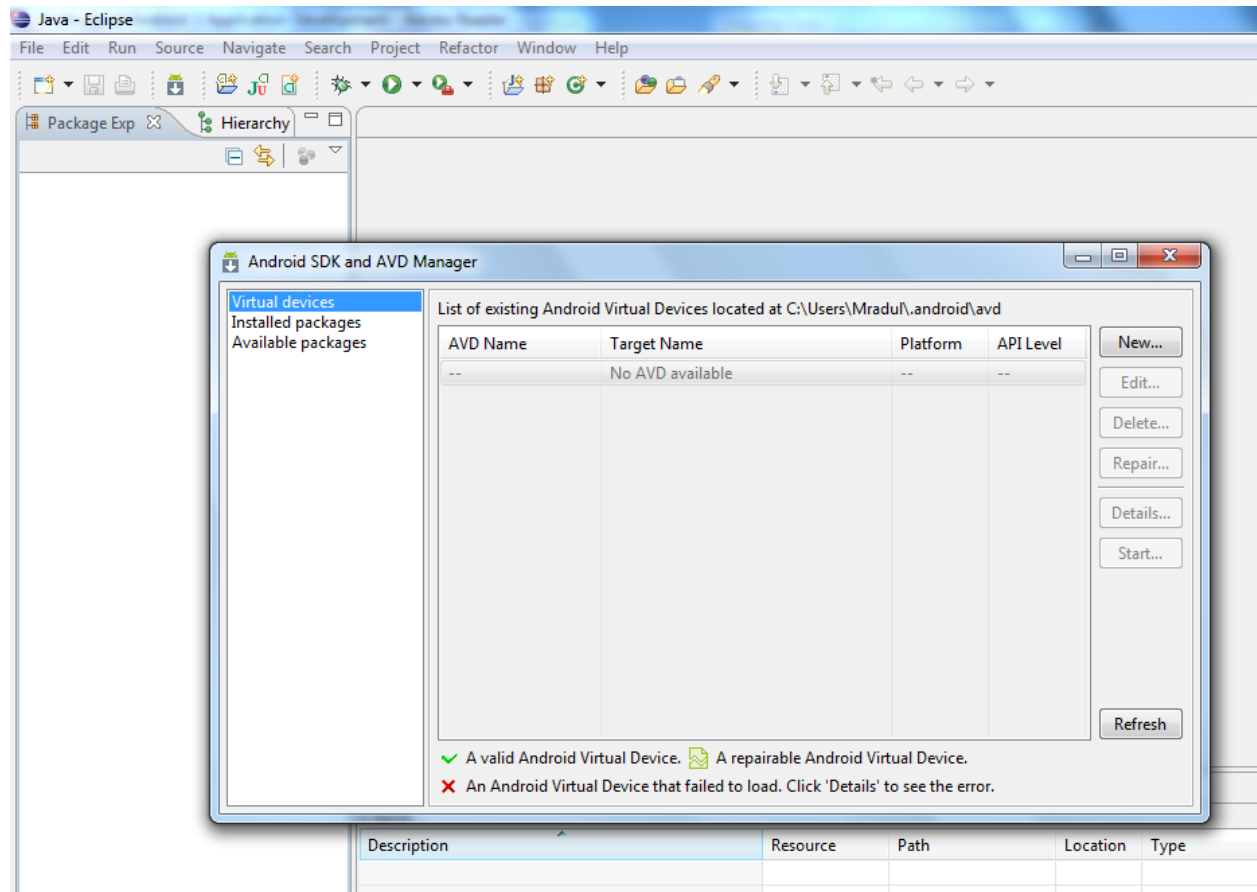

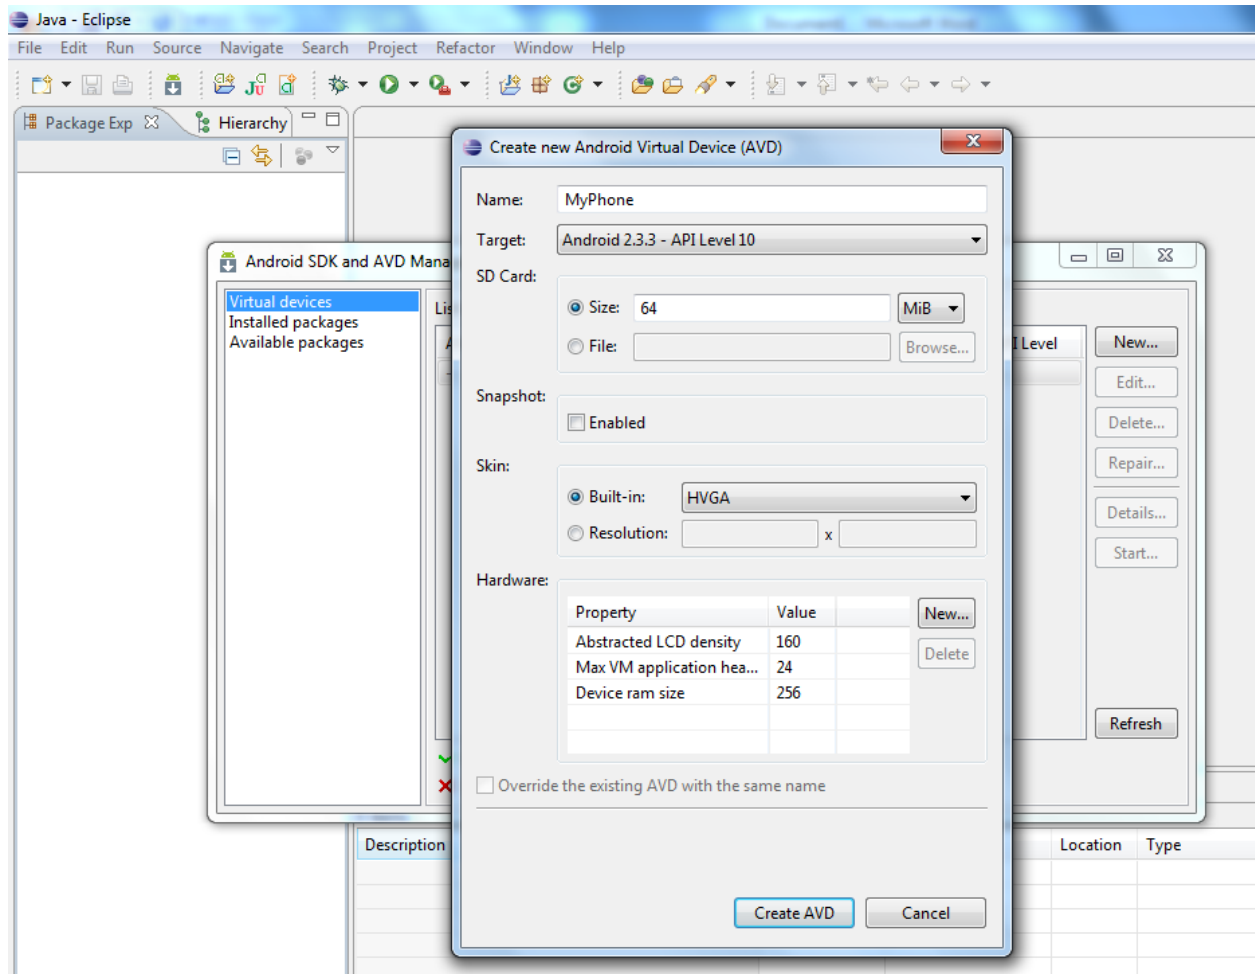

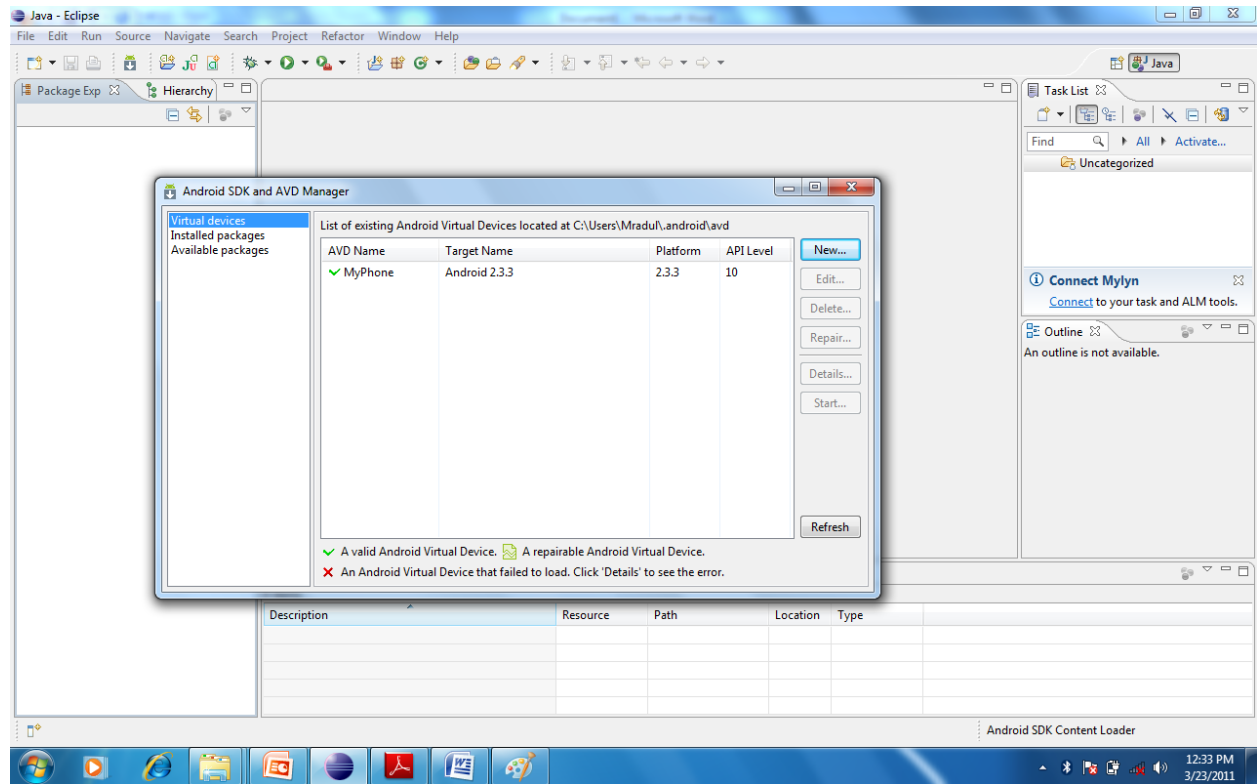

Configuring Emulator

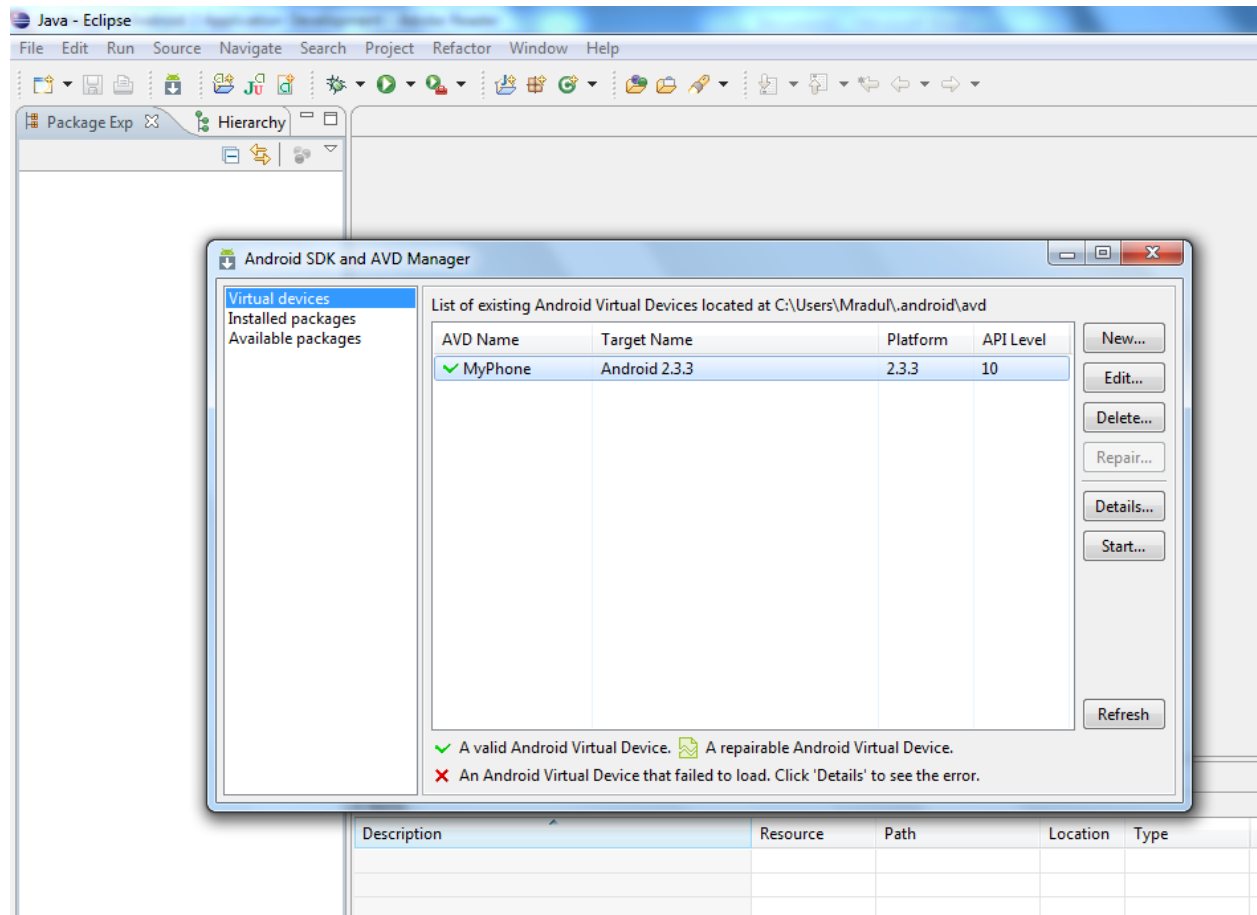

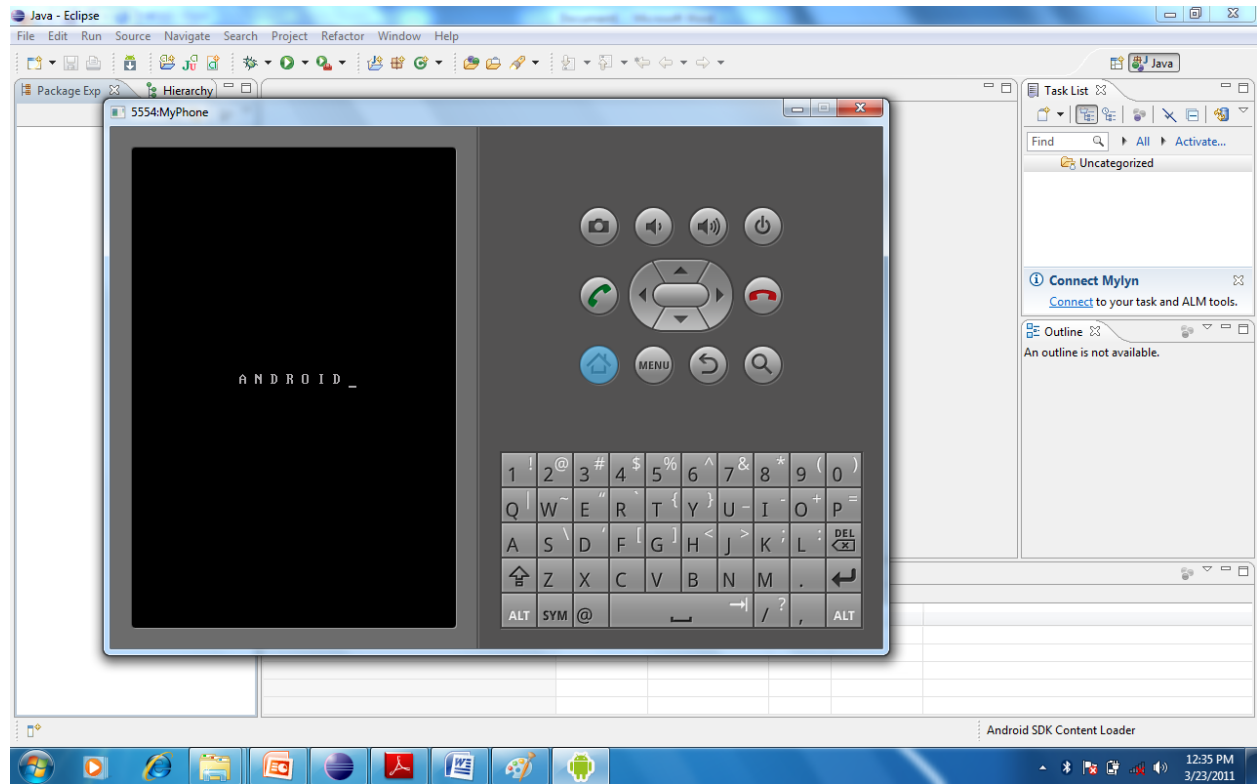

Testing Emulator

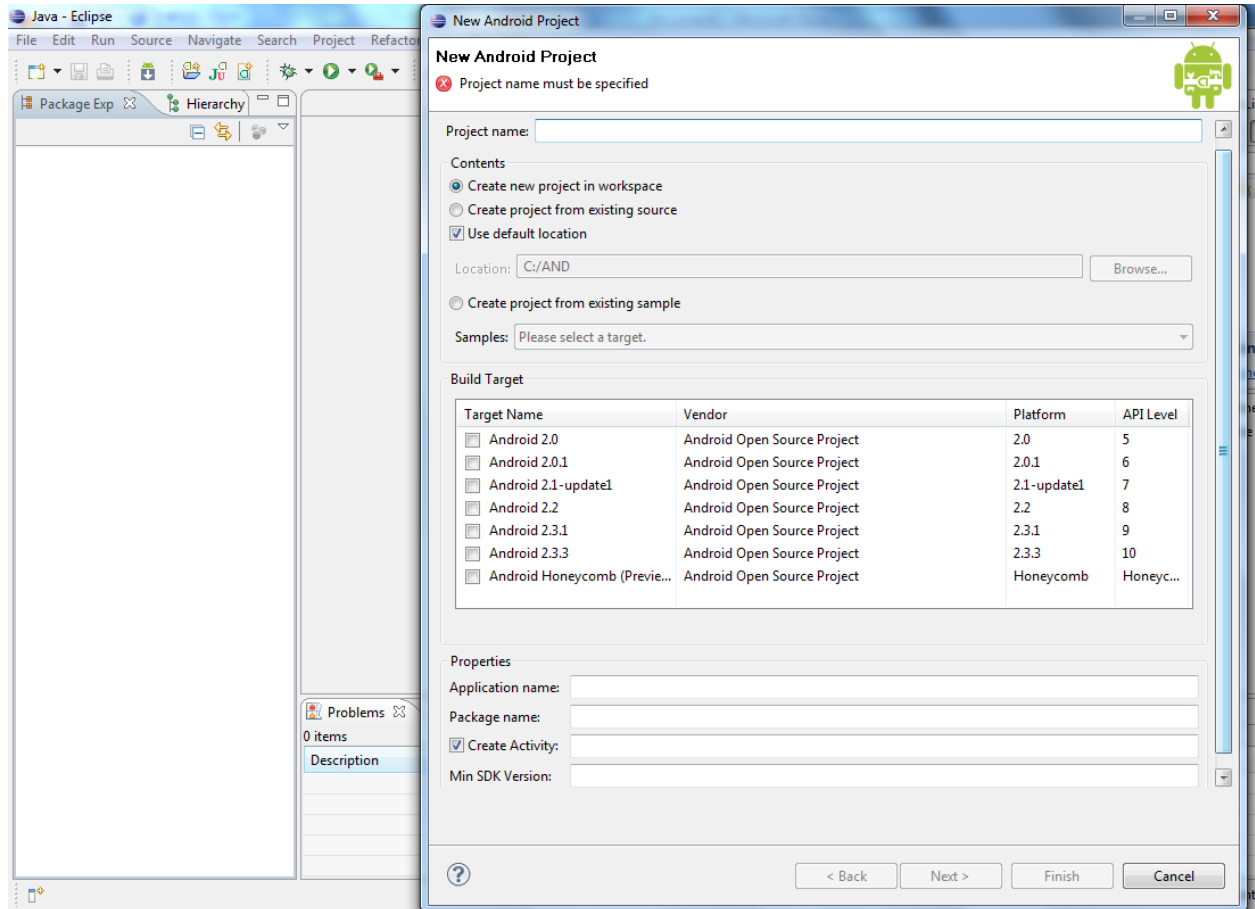

Click on start...

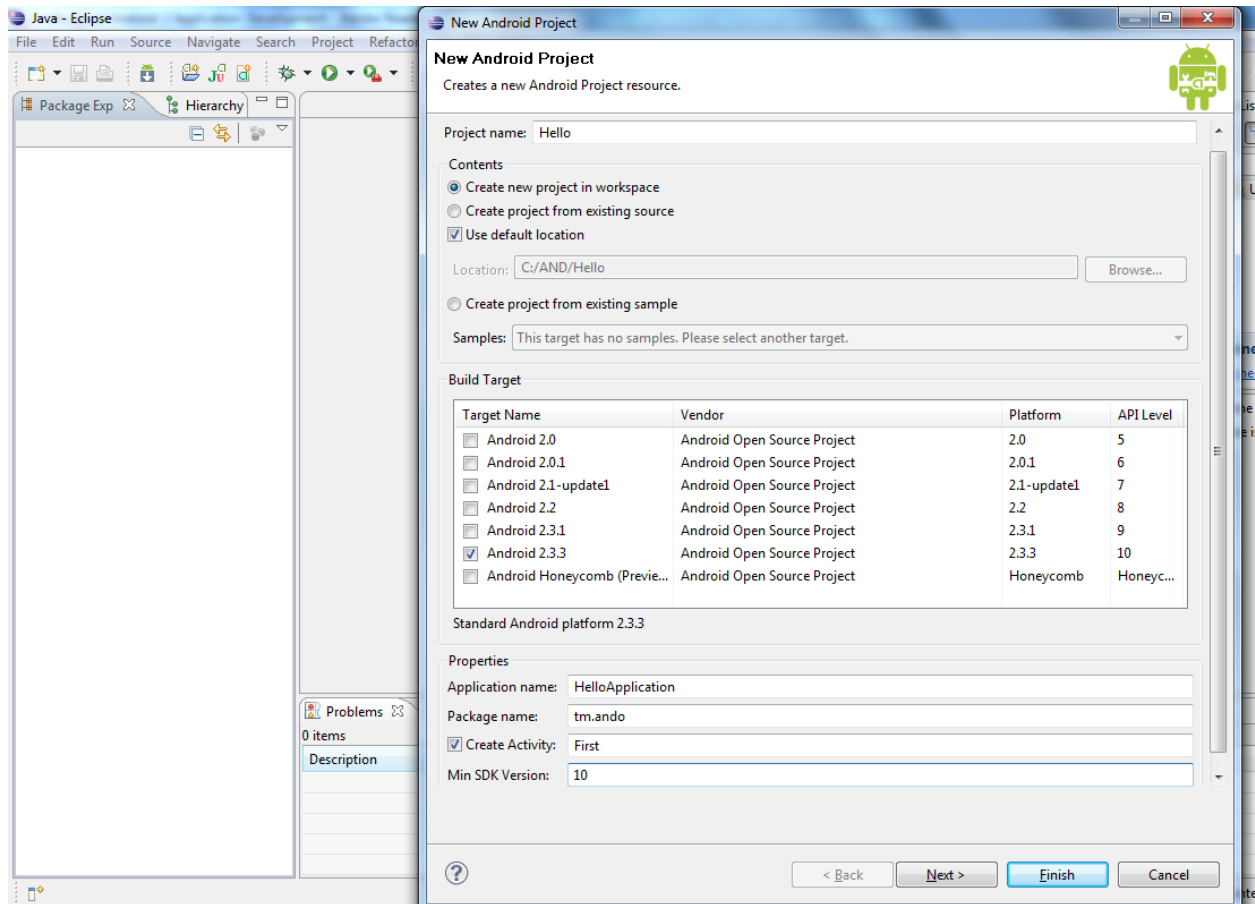

Soon it will start.....

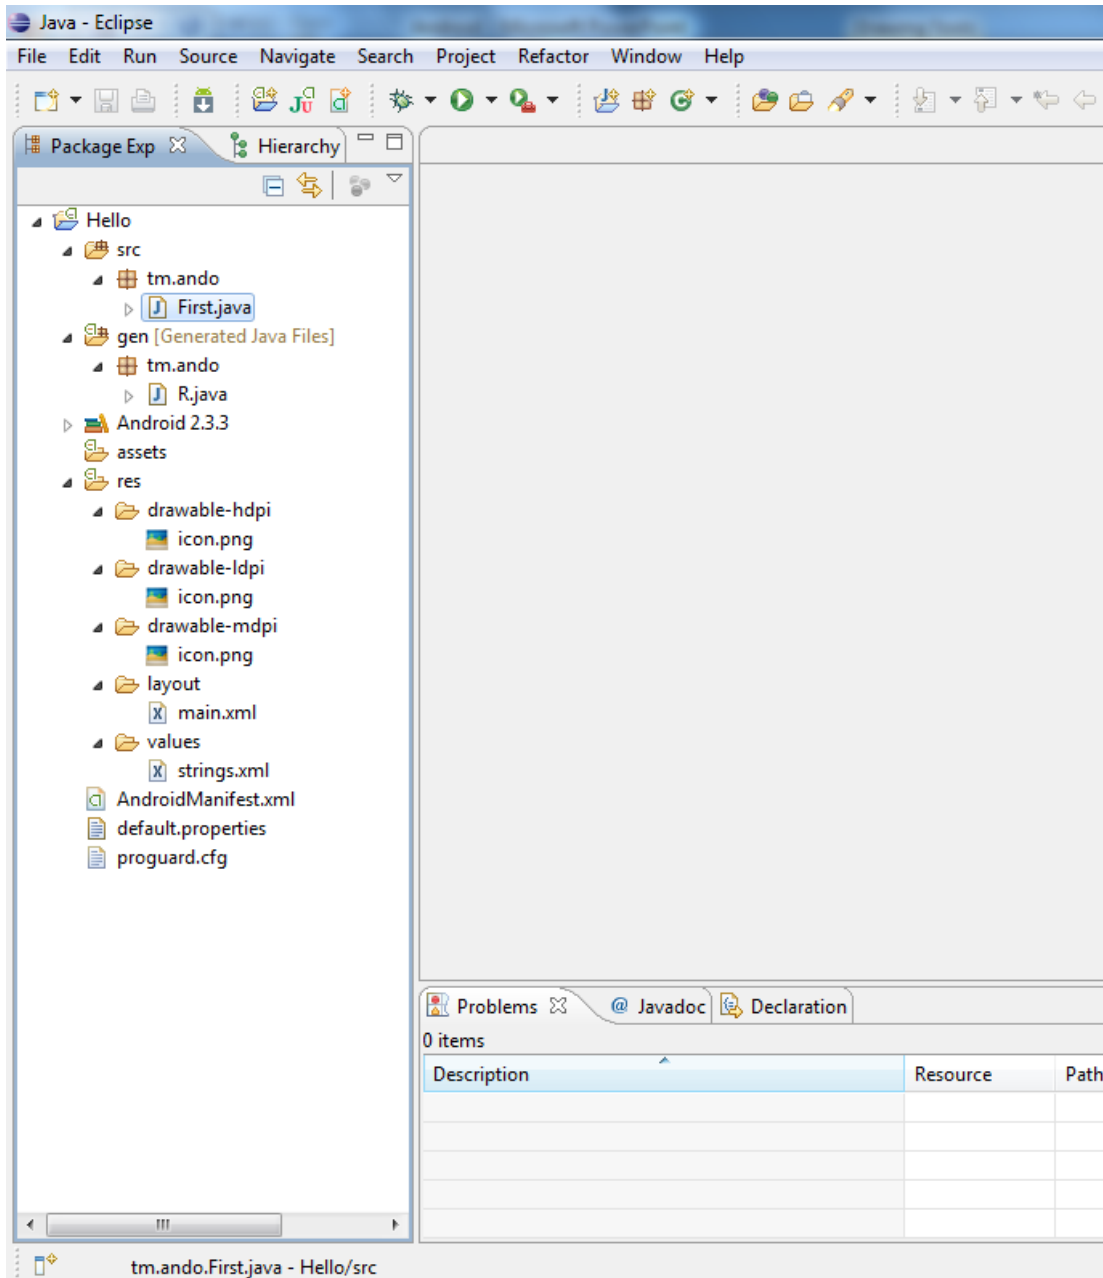

Creating Hello Project.....

File>> New >> Android Project>>

Click on Finish..

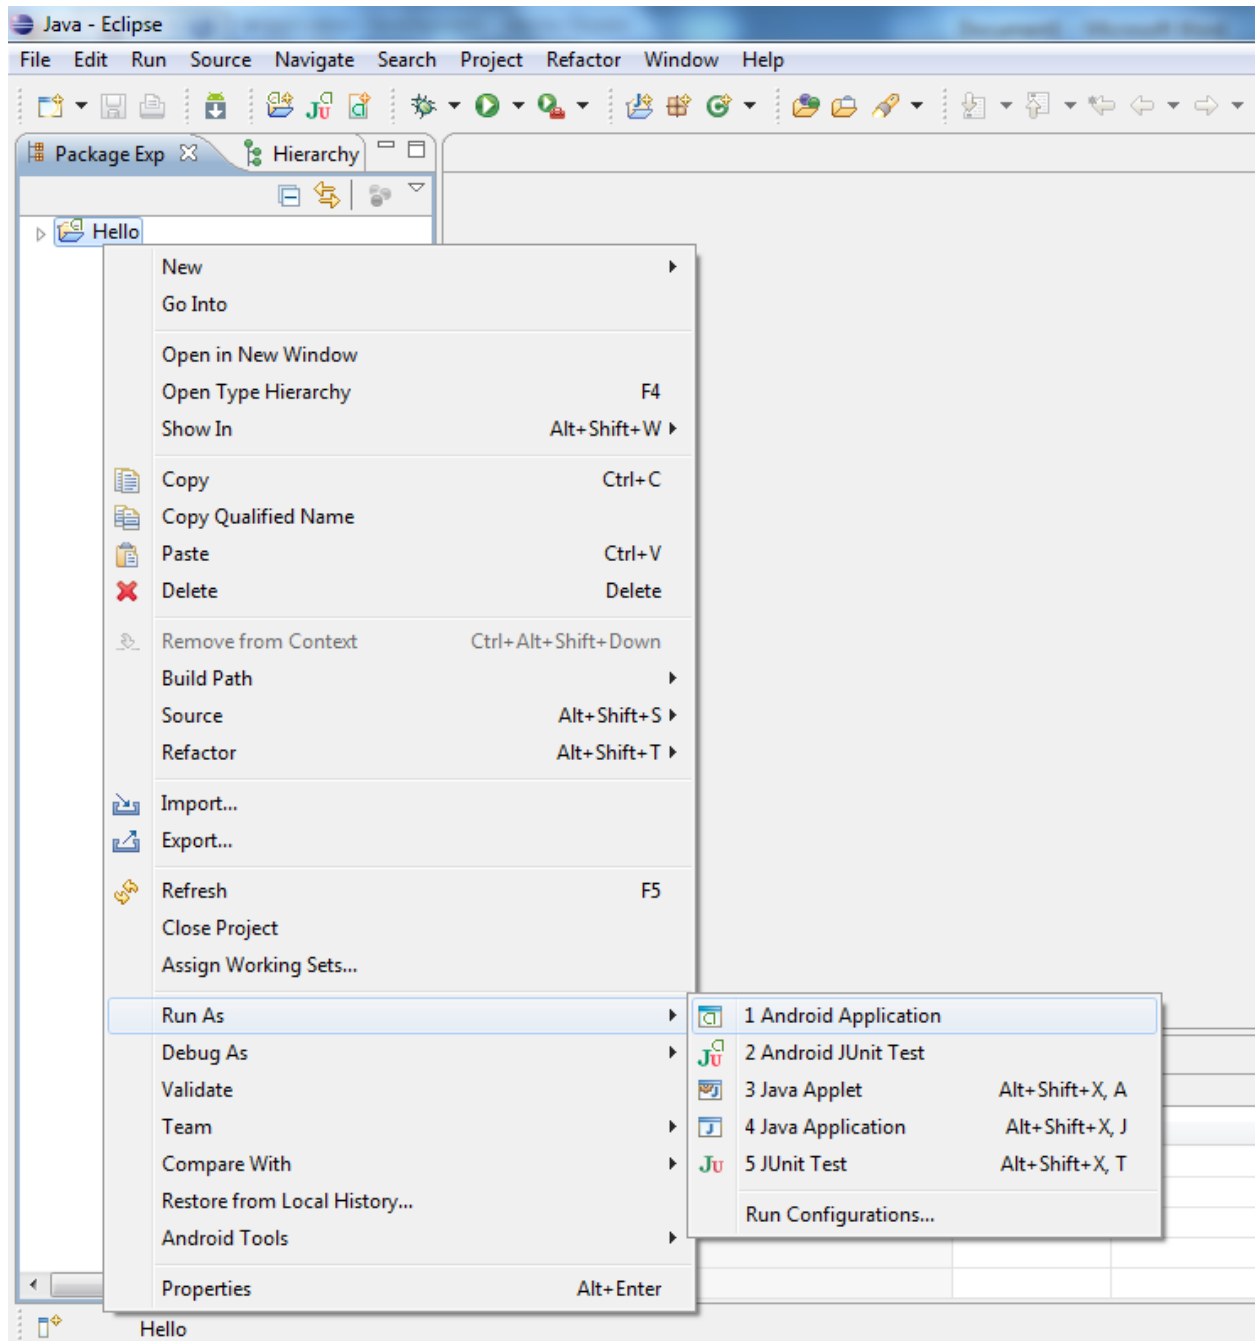

Source code

Source code snippets in this tutorial include:

- **First.java:** This implements an Android activity, the primary entry point to the sample application of this tutorial.
- **Main.xml:** This contains the visual elements, or resources, for use by Android **First** activities.
- **R.java:** This file is automatically generated by Android Developer Tools and "connects" the resources to the Java source code.
- **AndroidManifest.xml:** This lists a full AndroidManifest.xml file, along with a description of each of the important elements.

Running Program

Output.....
